# Introduction

## Android IP Video Phone SE780 Overview

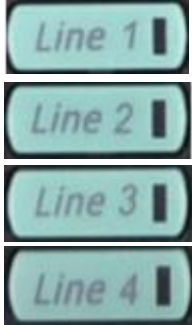

### With Attachment

<b>Item</b>	<b>Function</b>
<b>Power Adapter</b>	Power supply for phone.
<b>Network Cable</b>	Connect the phone to the network.
<b>Handset</b>	Make phone calls with the phone's basic functions.
<b>Handset Line</b>	Connect with the handle and the phone.

## Phone component descriptions

Key	Function
	<p>Soft key 1/2/3/4. Each of them can realize the same function with their corresponding key on the screen. The soft key can change along with the change of the interface.</p>
	<p>Line key 1/2/3/4. You could select any one to make the call if it has been registered. One SIP line can map one or more lines.</p>
	<p>Option key. You can browse and accomplish all functions of the phone through pressing this key.</p>

Return key. Press this button in the detailed interface, it will return to the previous interface; If it is pressed in the application program interface, the current program will be closed.

---

Confirm key.

---

Delete key.

---

Headset key.

---

R/Send key. Use the key to dial the last call number. It also could be used to make a phone call by sending a phone number.

---

Hands-free key. Make the phone into hands-free mode.

---

Volume control key. Turn down or turn up all kinds of volume by pressing these two keys.

---

Mute key. In the call mode, press this key in calling mode, you can hear the other side, and the other side cannot hear you; press this button again to leave this mode.

---

When the phone call is ringing, press this button to turn off the ring tips.

---

Home key. Press this key, the phone will return to the idle screen.

---

Navigation key.

---

Digital keyboard.

---

## The Installation of backplane

### 1. Set the telephone in horizontal

Set the backplane horizontally under the bottom of the telephone, and put back four feet of the backplane into the corresponding grooves which are at the bottom of the phone, and then press down firmly until the feet with the phone are closed. Right now place it horizontally on the desktop smoothly.

### 2. Vertically hang

Set the backplane vertically under the bottom of the telephone, and put back four feet of the backplane into the corresponding grooves which are at the bottom of the phone, and then press down firmly until the feet with the phone are closed. Right now place it vertically on the desktop smoothly or hang it on the wall.

## Interface introduction

Interface illustration picture 1

	Name	Meaning
	DC Power Interface	Input: 220V AC Output: 12V DC

(Left first)		LAN Network interface	Specification RJ45, connect it to PC.
(Left second)		WAN Network interface	Specification RJ45, connect it to network.
(Left third)		PSTN Normal phone interface	Specification RJ11, connect the general public telephone network(SE780 has no PSTN interface function)
(Right up)		Handle interface	Specification RJ9, used to connect the handle to the phone.
(Right center)		Handset interface	Specification RJ9, connect with handset.

**Interface illustration picture 2**

	<b>Name</b>	<b>Meaning</b>
(Left first)	 USB interface.	Connect it to USB disk.

(Right first)

HDMI interface.

Interface for high-definition audio and video. A-C interface, A to C interface.

---

• **Note:**

1. Put the handle line into the handle interface according to the interface illustration picture.
2. Install the backplane to the bottom of the phone with any of the above two methods.
3. Plug the power adapter into the DC port; poke the other side of the power adapter into an electric socket.
4. Insert one end of RJ45 network cable into the phone's WAN port (Please refer to the interface illustration picture 1) and put the other end into the network equipment. After that, if the network connection status on the status

bar is displayed as , actions such as making some telephone calls and surfing the internet could be done. If the network connection status on the

status bar is displayed as , please verify whether the network was configured correctly and the network cable was plugged in correctly.

## Touch Screen Description

You can touch the screen manually to complete the corresponding operation. Here are three ways to use:

**Click:** Any icon or button can be clicked to realize its function.

**Long press:**

1. Long press the idle desktop. After that, an option box could be popped up, and then you can do more according to the prompt.
2. Long press one list such as a list of contact list. After that, another option box could be popped up, and then you can do more about this list according to the prompt.

**Figure:**

**Slide:**

Slide your hand on the screen upward or downward slowly to move the interface on the screen.

On some kinds of screen such as idle desktop, you can switch the desktop just by moving your fingers on the screen to left or right. Dragging your finger to slide will not select or activate anything on the screen.

You can just wait or gently press any place of the screen to stop the sliding after your fingertips rapidly sliding on the screen. Gently pressing or touching to stop the scrolling will not select or activate anything on the screen.

## Update of the phone

Please contact with service providers to get the new version to upgrade.

### **Auto provision:**

Keep phone registered successfully and configure parameters about automatic updates such as server address, upgrade file name, time interval and so on.

And then the phone will check for updates from the server at a fixed time intervals and upgrade itself. See the specific automatically upgrade instructions, please switch to [Update](#).

**Manual update:** USB update.

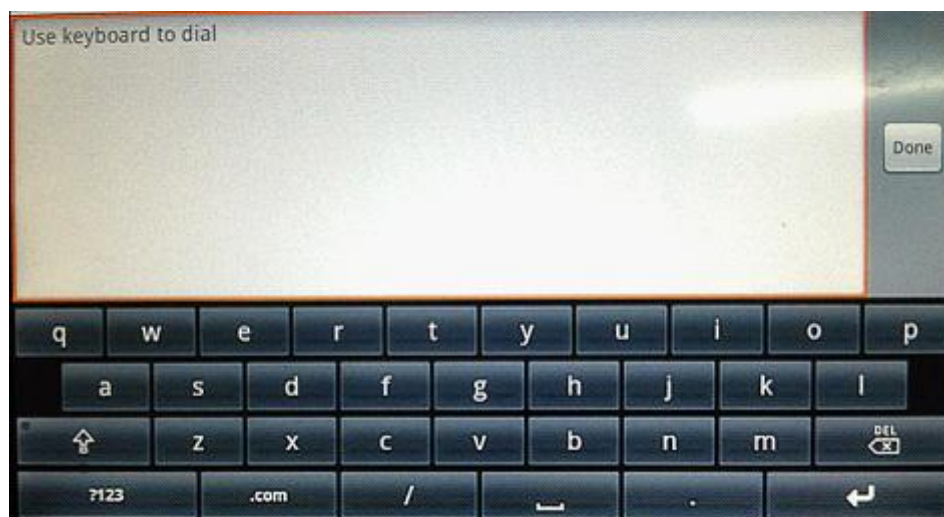

**USB update.** It has two update methods:

1. Create a directory named "imp install" in the USB disk, and copy the update file to this directory, and then insert the USB into the phone. The phone will automatically compare the update image, if the image name is different from the phone has, it will automatically update. (Upgrade where needs to be updated)
2. Create a directory named "imp Linux" in the USB disk, and copy the update file to this directory, and then insert the USB into the phone. The phone will automatically compare the update version number in the U disc and telephone after rebooting. Then it will automatically upgrade just as the version number and the image in the U disc is different. (Upgrade all system)

# Basic Function

## Screen Keyboard

If you need to input, click on the input box. A screen keyboard will automatically be displayed. (Every input method has its own unique screen keyboard).For instance:

Press the return key to close the screen keyboard after finishing the input.

### Input Text :

1. Tap the text field.
2. Tap the screen keys on the keyboard.

<b>Type in capital letters</b>	Shift key, tapping shift key can switch the uppercase and lowercase.
<b>Delete character</b>	Delete character, tap  key to delete a character, if you want to delete many characters, tap this icon for a long time.
<b>Type in digital, punctuation and symbols</b>	Tap  key to switch to digital, punctuation and symbols input interface.
<b>Space</b>	Space symbol.
<b>Enter</b>	Enter symbol, tap this key to switch to next line.

## Status Bar

All of the status information about Android IP Video Phone SE780 are displayed on the top of the screen. You can click on the notification icon in the idle screen or drag down the drop-down list with your fingers to enter the notification panel to further review and deal with all of the information.

**Note: The right icon of the status bar can't be drag, just the left can.**

Status bar	Meaning
<b>The right icon of the status bar</b>	
 <b>Handset mode</b>	Indicates that the phone is in the handset mode.
 <b>Headset mode</b>	Indicates that the phone is in the headset mode.
 <b>Silent mode</b>	Shows that the phone is in silent mode. This mode can be canceled by directly clicking the mute button when the screen is in the idle interface.
 <b>Hands-free mode</b>	Indicates that the call is in hands-free status.
 <b>Alarm clock</b>	If you set an alarm clock, the alarm clock icon will display on the status bar.
<b>The left icon of the status bar</b>	
 <b>Network status (successful)</b>	Displays that the network connection is successful. Tap the icon directly into the network settings.
 <b>Network status (failed)</b>	Shows no network connection. You need to check the network is properly connected and the parameters are configured correctly.
 <b>USB</b>	Displays that the phone successfully identifies the USB device. Tap the icon directly to switch into the USB application wizard.
 <b>New call</b>	When the phone has a new call, it will appear in the status bar.
 <b>Missed call</b>	Shows that there are several missed calls. You can click on the icon directly to switch into the call log.

	<b>Do not disturb</b>	Shows that the phone is on Do Not Disturb mode. Any of the call could be directly rejected before it's ring interface appears. There is only a missed call icon leaving in the status bar.
	<b>Call forward</b>	Shows that the call forward function is opened.
	<b>Auto answer</b>	Shows that the auto answer function is opened.
	<b>Black list</b>	If a phone number is added to the firewall, then open the firewall function, all calls about this phone number could be rejected directly.
	<b>New record</b>	Indicates that there are several new unread phone recordings.

## Main Screen

Android IP Video Phone SE780 will go directly to the main screen after rebooting.

The main screen contains three idle interfaces. Each one can display some programs shortcuts. You can switch the desktop just by moving your fingers on the screen to left or right.

### Default Screen:

**The idle interface**

The icon at the upper left of the idle interface is the phone status icon. It can display some state including network connection status and the registration status of each line in time.

Click the "Application" icon, and then it will jump to the following interface.

You can slide your fingers on this interface to glance over all of the applications. You can click on some program icons to open the corresponding application program.

**The application program interface**

If you want to delete application shortcuts on the idle interface, you can long

press the shortcut, and then put it into the dustbin at the bottom of the interface.

(**Note:** Let it go just as the icon and the dustbin turned red as is shown at the following picture.)

**The picture of delete operation**

## The Application of Android IP Video Phone SE780's

### Function:

#### Phone

Click this icon, and it will switch to pre-dial interface. You can make some phone calls through the screen or keyboard.

#### Email

Has the function of sending and receiving e-mail. When an account has been configured successfully, you can send and receive your e-mail on the phone and this account will automatically sync the contacts to the mailbox account.

#### Settings

It contains System, Network, Account, Call, Display and so on. You can configure some settings.

#### Calculator

---

Work with simple calculation operations such as add, subtract, multiply, divide and some advanced operations.

**Note pad**

Record a number of important events or you can record information such as phone number when press the "Note pad" during a call.

**Memory Key**

You can make a rapid call through your contacts in the memory key.

**Contacts**

Support functions such as search, add, remove and edit.

**Browser**

You can surf the internet through this browser as convenient as a computer.

**Recorder**

Provide call recording and the ordinary recording.

**Alarm Clock**

You can set your own time and the alarm will remind you at your appointed time.

**Android settings**

It contains the Call settings, Basic settings, Advanced settings, VOIP and so on, you can configure some settings in the corresponding menu.(Android system settings)

**Gallery**

View photos stored on the phone, or through the USB storage device storing photos or videos, you can enter the photo gallery for dynamic playing.

**File Manager**

You can easily manage the files.

Through the camera you can take High-definition pictures and make other operations.

**Camera**

---

Like the mobile phone, with messages to write, read and send function.

**Message**

---

Music player. It can play music in various formats.

**Music**

---

All calls will be transferred into voice mail when the MWI is enabled.

**MWI**

---

Calibrate the screen to ensure the accuracy of the screen.

**Screen Calibration**

---

Enter into the calendar and you can view the accurate date.

**Calendar**

---

Enter the call log and you can view all call records. You can also view the "Incoming Calls", "Outgoing Calls" and "Missed Calls" records by pressing the Option key.

**Call log**

---

Ping box is the system's built-in toolbox of network testing tool; You can use it to check whether the network is unobstructed.

**Ping Box**

---

The shortcut of close the screen.

**Screen Off**

---

The shortcut to reboot the phone quickly.

**Reboot**

---

## Desktop Widgets

### Operation steps:

Long press the idle screen and the list named "Add to Home Screen" will appear. Tap the "Widgets" and then choose the widgets you want to display on the desktop. It is easy to quick operate which saves the time and look beautiful.

**Power indicator**

It can control the power light to turn on or turn off. If the power light is turned off, like the first picture. As this time whether making calls or doing other operations, power light is often destroyed.

If power light is turned on, like the second picture. As this time when the telephone is called or it has missed calls, the power light will twinkle; when the telephone is calling or in the idle status, the power light have been always light; when the telephone has one call, then another call is ringing, the power light will twinkle.

**Idle screen display:**

**Light off**

**Light On**

**Analog clock**

Analog clock which looks like a watch can be displayed on any space of the idle screen; it is convenient for you to check the time.

**Idle screen display:**

**Digital clock**

Digital clock is displayed with white fonts and time or date could be seen directly. You can move it to any space.

**Idle screen display:**

The default search bar is the Google's Quick Search Box; You can enter any content you want to search.

**Idle screen**

**Search**

display:

**Call set**

It controls four functions: DND, Call forward, Auto answer, Blacklist. You can make some settings quickly just by clicking the button to turn on or turn off the function.

**Idle screen display:**

This widget shows the network connection status and the registration status of each line.

network connection status:

It shows the network connection modes and IP information if it is successful. But it shows "Network disconnect" once it is failed.

Registration status:

**Phone status**

lamp	Contents of registration	Status
gray	null	not registered
red	phone number@ server address	Failed
green	phone number@ server address	successful on the main server
yellow	phone number@ backup server address	successful on the backup server

**Idle screen display:**

**Picture frame**

You can display anyone of your favorite picture on the idle screen through this picture frame.

**Idle screen display:**

**Music**

Using this widget, you can listen to your music quickly and enjoy your life easily at any time.

**Idle screen display:**

View the date, add activities and remind, etc.

**Calendar**

**Idle screen display:**

Long press the idle screen, and the "Add to Home Screen" list will be popped up, tap "Folders" and enter to the "Select folder" list, select the appropriate file to add to the desktop:

**New folder**

You can move the application shortcuts on the desktop to the new folder.

**Notes**

It will show recently added content's title, tap the title to view the detailed information.

**All contacts**

Show all contacts in it.

**Starred contacts**

Show favorites contacts in it; tap a contact to view detailed information.

**Contacts with phone numbers**

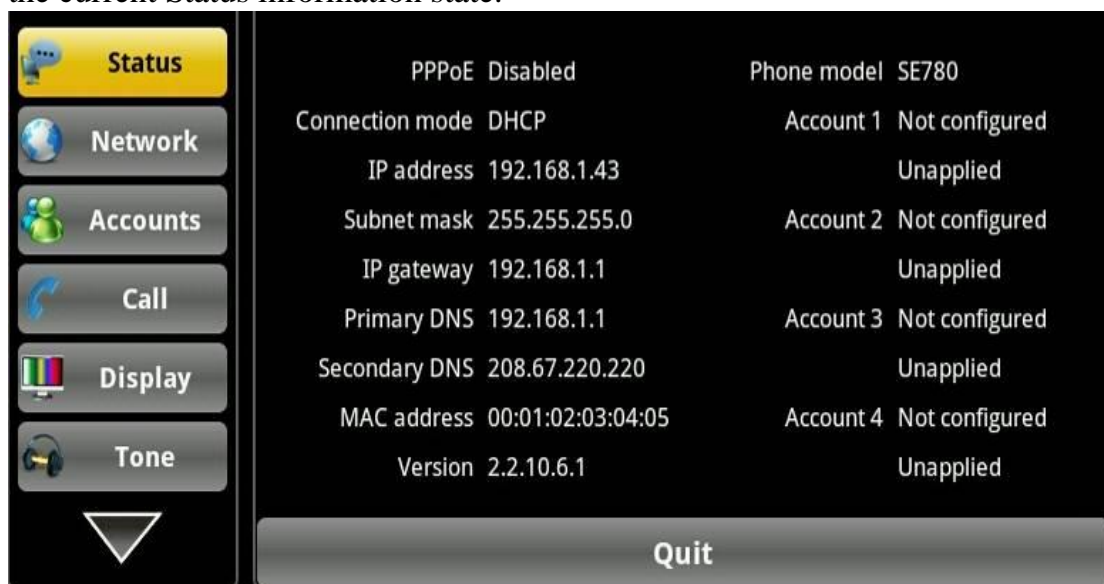

It will show the contact which has the number and do not show the contact which has no phone number.

# Settings

## Status

Tapping "Settings" can directly enter the default window "Status". It displays the current Status information state.

**Status interface**

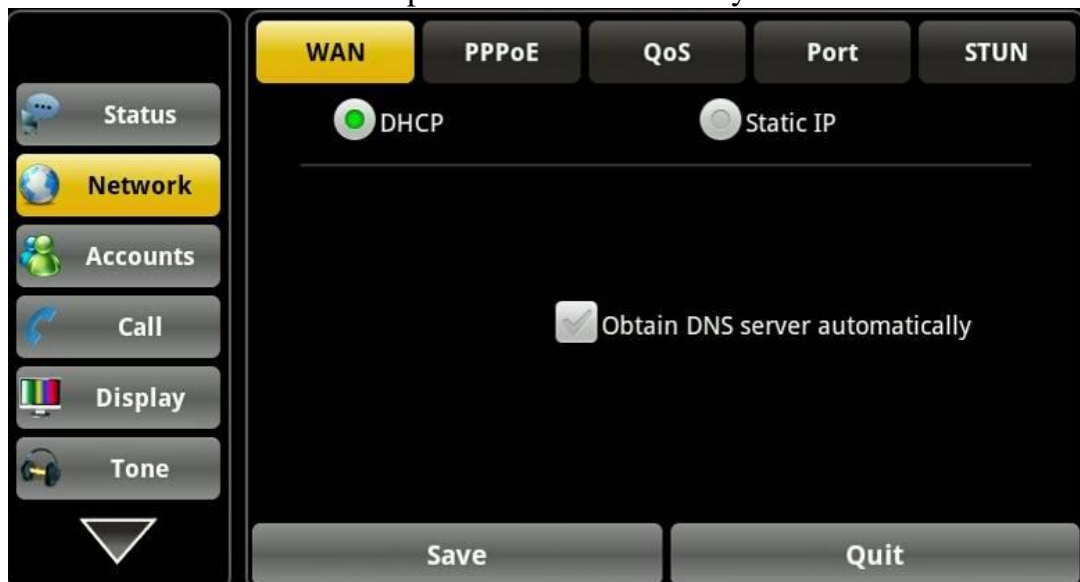

Configuration item	Meaning
<b>PPPoE</b>	Displays the connection status of the PPPoE, there are three display states : Disable、 Connection and the IP address.
<b>Connection mode</b>	Displays the selected network mode, DHCP or Static IP.
<b>IP address</b>	Displays the IP address of the current network model.
<b>Subnet mask</b>	Displays the Subnet Mask of the current network model.
<b>IP gateway</b>	Displays the default gateway of the current network model.
<b>Primary DNS</b>	Displays the primary DNS server address of the current network model.
<b>Secondary DNS</b>	Displays the standby DNS server address of the current use of the network model.
<b>MAC address</b>	Displays the current MAC address.
<b>Version</b>	Displays the current version of the phone.

<b>Phone model</b>	Displays the current phone model.
<b>Account</b>	Displays the current configuration of the Account and more detailed information will be displayed on the desktop widget.

## Network

### Network

Tap "Network"----> "WAN mode" interface, the default interface is "DHCP": click "Save" button to save successfully after the configuration of each interface is finished. Then a tip box "save successfully" will be shown.

**DHCP interface**

## Static IP interface

Configuration	Meaning
<b>DHCP</b>	<p>Under the default situation the phone attempts to contact a DHCP Server in your network in order to obtain its valid network settings, e.g. IP address, sub mask, gateway, DNS server, etc.</p> <p><b>Obtain DNS server automatically :</b> If you enable it ,the DHCP server will send the phone the DNS address which could used by it when it is assigned a DHCP ip address</p>
<b>Static IP</b>	<p>If your phone cannot contact a DHCP Server for any reason, you need to enter the network settings manually via Static IP Address.</p> <p><b>IP address:</b> Input your assigned IP address.  <b>Subnet mask:</b> Input your assigned subnet mask.  <b>IP Gateway:</b> Input your assigned gateway.  <b>Primary DNS:</b> Input your assigned DNS server address.  <b>Secondary DNS:</b> Input your assigned Secondary DNS server address.</p>

## PPPoE

Tap "Network" ----> "PPPoE". After configuring the parameters, you can click "Save" button to save successfully.

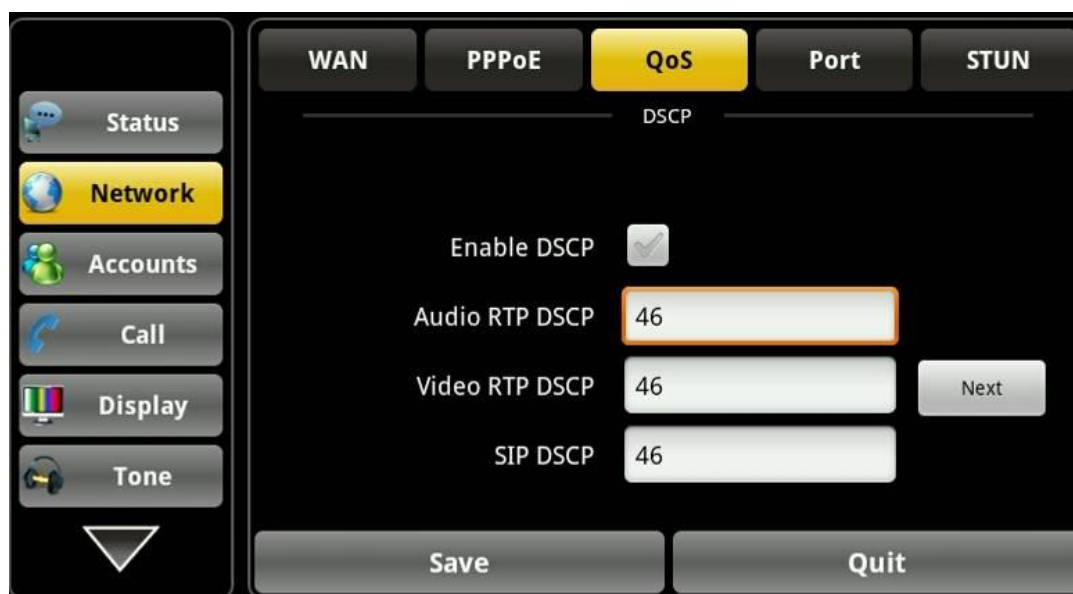

## PPPoE interface

Configuration	Meaning
PPPoE	<p><b>User:</b> Input your assigned PPPoE Username.</p> <p><b>Password:</b> Input your assigned PPPoE Password.</p> <p><b>Auto connect on power up:</b> Whether to automatically connect PPPoE on power up.</p> <p><b>Auto reconnect:</b> When connecting failed whether to automatically connect PPPoE.</p> <p><b>Enabl PPPoE:</b> Whether to enable PPPoE.</p> <p>After the parameter configuration is completed, if you do not select "enable PPPoE", then you can click on the "save" button, it only saves the configuration parameters; but if you select "enable PPPoE" and click "save" button, it can immediately use the PPPoE mode to connect the network, at the same time it will pop up PPPoE connection box, clicking the "disconnected" will pop up PPPoE configuration frame; if you click "connect", it will reconnect PPPoE; if you click "Cancel" button, it will only save the configuration parameters which have been set, not to enable PPPoE connection.</p>

## QoS

Tap "Network"----> "QoS", after selecting or modifying the default settings click the "Save" button to save successfully.

### QoS-DSCP interface

DSCP is one standard of QoS. It can set the priority of Voice, Video and Signal.

Configuration item	Meaning
<b>QoS- DSCP</b>	<p><b>Enable DSCP:</b> Enable/Disable DSCP.</p> <p><b>Audio RTP DSCP:</b> Set the number of Audio RTP DSCP.</p> <p><b>Video RTP DSCP:</b> Set the number of Video RTP DSCP.</p> <p><b>SIP RTP DSCP:</b> Set the number of SIP DSCP.</p>

Click Next to enter the QoS-WAN VLAN page,

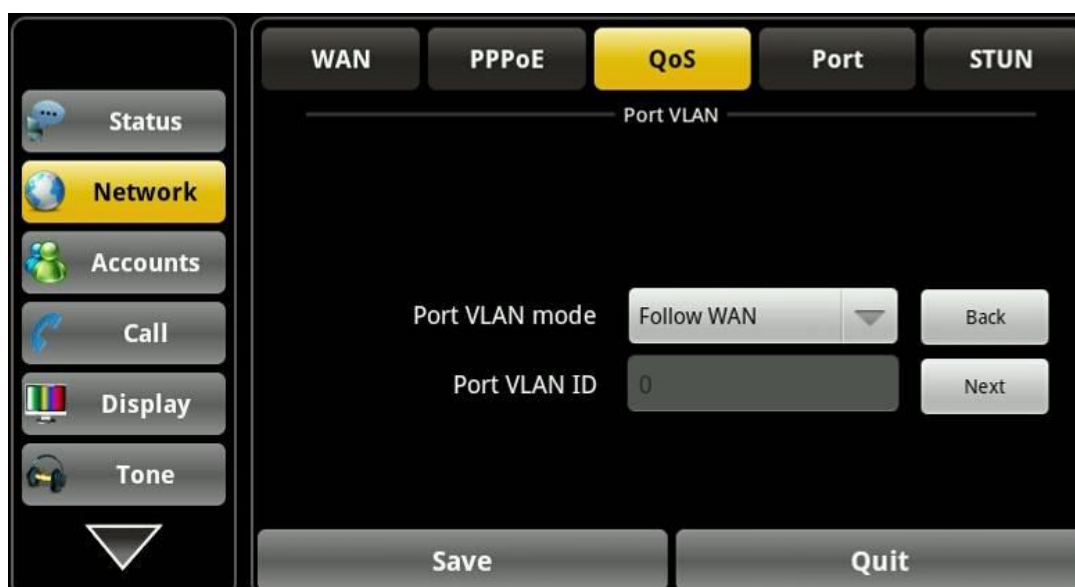

### QoS-WAN VLAN interface

VLAN is a group of hosts with a common set of requirements that communicate as if they were attached to the Broadcast domain, regardless of their physical location. The following table lists the instruction of the field about the VLAN Setting. Enable VLAN, then you can set VLAN ID, the range of ID number is 0~4095; you can also set the priority of 802.1p, the range is 0~7.

**Note: You must enable DSCP if you want to set 802.1P priority.**

Configuration item	Meaning
<b>QoS- WAN VLAN</b>	<p><b>Enable WAN port VLAN:</b> Enable/Disable WAN port VLAN.</p> <p><b>WAN port VLAN ID:</b> Set the number of VLAN ID.</p> <p><b>Audio 802.1P priority:</b> Set the priority number of Audio 802.1p priority.</p> <p><b>Video 802.1P priority:</b> Set the priority number of Video 802.1p priority.</p> <p><b>SIP 802.1P priority:</b> Set the priority number of SIP 802.1p priority.</p>

Click Next, enter QoS-Port VLAN interface

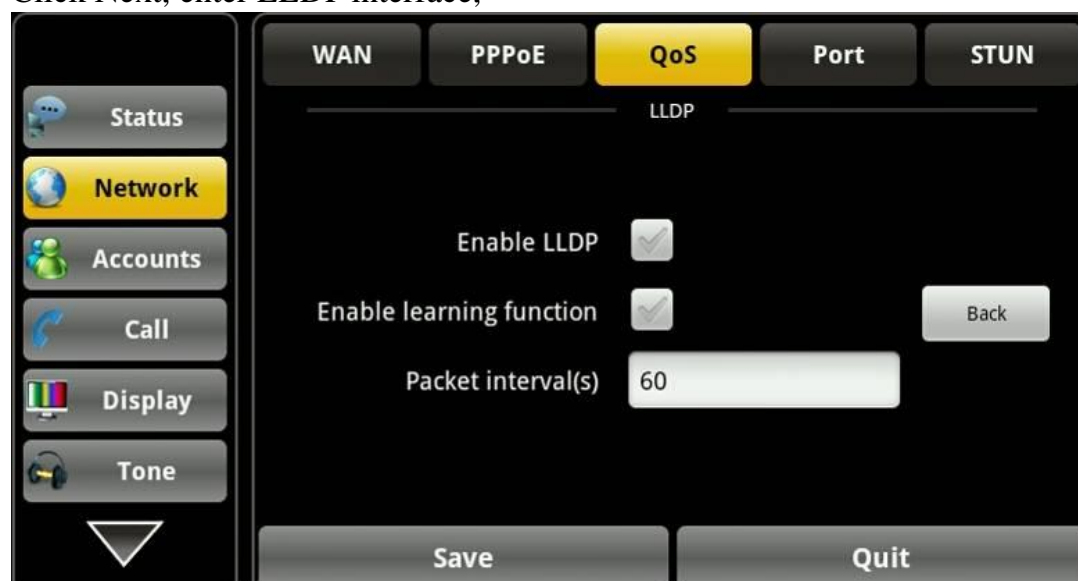

### Port VLAN interface

Port VLAN is based on port VLAN, in the same VLAN port to communicate with each other.

Configuration item	Meaning
QoS- Port VLAN	<p><b>Port VLAN mode:</b> Select the status of Port VLAN mode.</p> <ul style="list-style-type: none"> <li>➤ Disable: Disable Port VLAN.</li> <li>➤ Follow WAN: Follow the ID number of WAN.</li> <li>➤ Enable: Enable Port VLAN and set the LAN Port VLAN ID different from WAN.</li> </ul> <p><b>Port VLAN ID:</b> Set the number of LAN Port VLAN ID different from WAN.</p>

Click Next, enter LLDP interface,

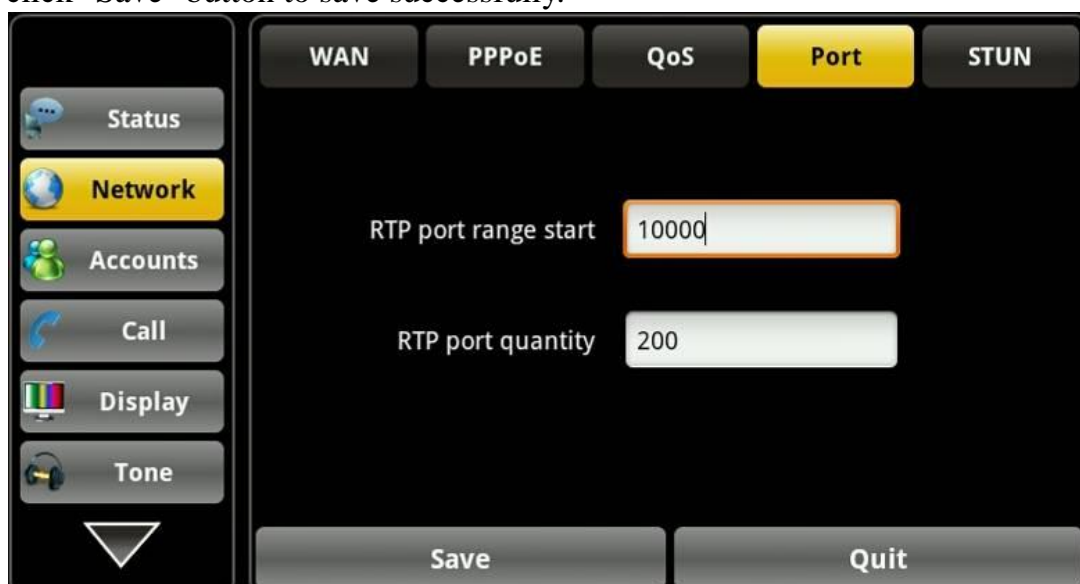

### LLDP interface

Configuration item	Meaning
QoS-LLDP	<p><b>Enable LLDP:</b> Enable/Disable LLDP.</p> <p><b>Enable learning function:</b> After enabling LLDP learning function, telephone can automatically learn the number of DSCP, 802.1p, VLAN ID of the network. If the number is different from the number of network, telephone will change its own value to the value of the network.</p> <p><b>Packet interval(s):</b> The time interval of sending LLDP Packet. Default is 60(s).</p>

### Port

Tap "Network" ----> "Port", after selecting or modifying the default settings click "Save" button to save successfully.

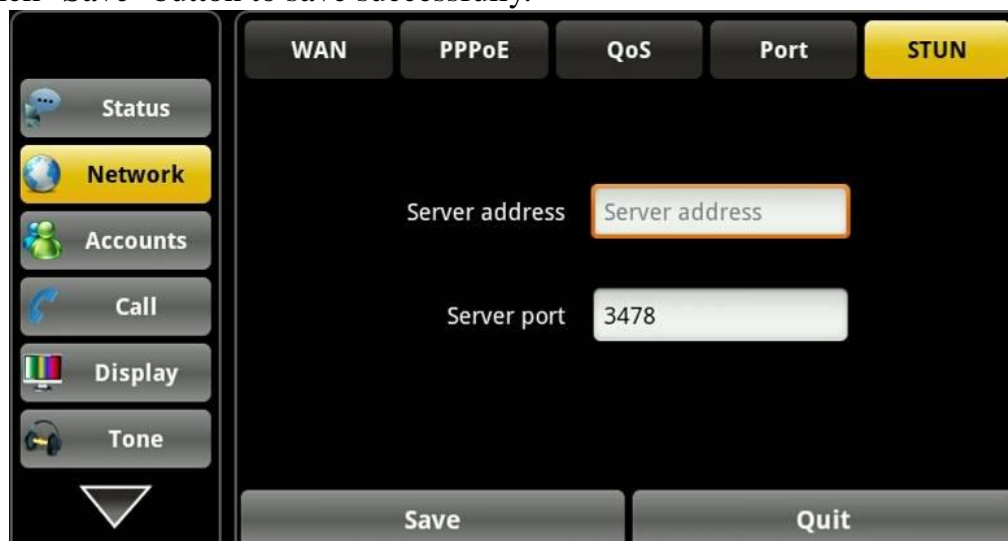

### Port interface

Configuration item	Meaning
Port	<p><b>RTP port range start:</b> Set the telephone's RTP start port. This port is distributed to dynamic allocation. (The value is 10000--60000)</p> <p><b>RTP port quantity:</b> Set the maximum number of allocated RTP port. The default is 200.</p>

## Stun

Tap "Network" ----> "STUN", after selecting or modifying the default settings click "Save" button to save successfully.

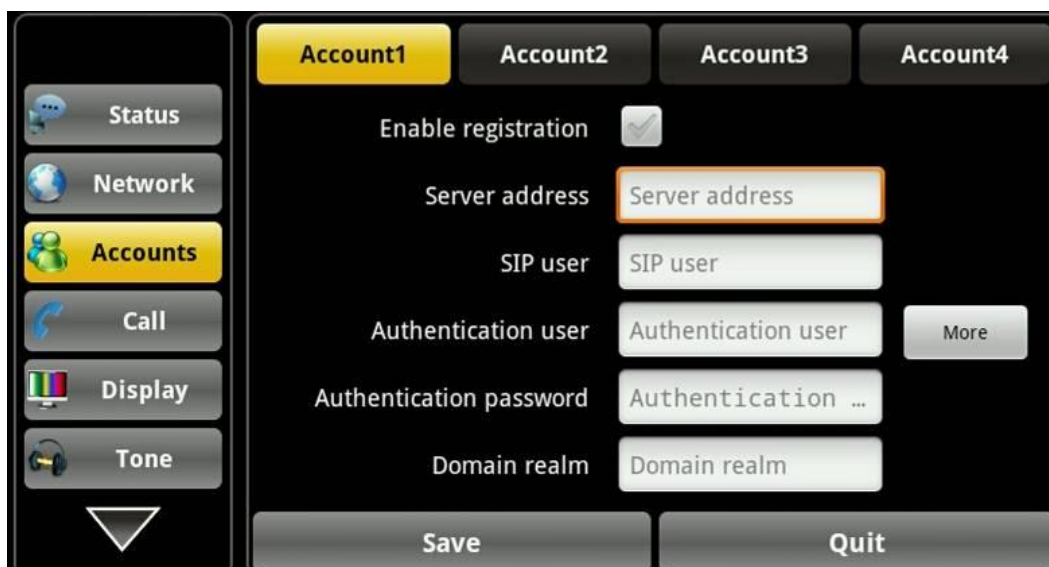

**STUN interface**

Configuration item	Meaning
STUN	<p><b>Server address:</b> Configure the SIP STUN server address.</p> <p><b>Server port:</b> Configure the SIP STUN server port.</p>

## Accounts

Tap "Accounts"---->"Account1", after setting the parameters you can click the "More" button to switch to the next page to set; it has a total of five interfaces, after all the parameters are set, you can click "Save" button to save successfully. (You can also save single page.)

(**Note:** The Account1, 2, 3, 4 has the same settings.)

Account page 1

Configuration item	Meaning
Account	<p><b>Enable registration:</b> Enable/Disable register.  <input type="checkbox"/> Disable register, <input checked="" type="checkbox"/> Enable register.</p> <p><b>Server address:</b> Set your SIP server address. It supports the address in the form of domain name.</p> <p><b>SIP user:</b> Input the phone number assigned by your VoIP service provider. Phone will not register if there is no phone number configured.</p> <p><b>Authentication user:</b> Set your SIP account.</p> <p><b>Authentication password:</b> Set your SIP password.</p> <p><b>Domain realm:</b> Configure the SIP domain name (You do not need to configure it because the system will configure automatically).</p>

### Account page 2

**Display name:** Configure the display name, it allows the English alphabet input (does not support Chinese).

**Server name:** Configure the SIP register server name.

**Server port:** Configure the SIP register server port.

**Registration expires:** Configure the server registration expire(s), default is 60 seconds. If the registration time of the server required is greater or less than the time of the phone to configure, telephone can automatically modify to the time limit that server recommended, and register again.

**DTMF type:** Select DTMF type, there are four types:

- DTMF\_RELAY
- DTMF\_RFC2833
- DTMF\_SIP\_INFO
- DTMF\_AUTO

Different server vendors can provide different models.

**RFC protocol edition:** Configure the protocol version of the phone. When your phone needs to communicate with gateway which uses SIP1.0, such as CISCO5300, you need to configure to RFC2543 to conduct normal communication. RFC3261 is used by default.

**Anonymous call edition:** Configure whether to

use anonymous security call. It supports RFC3323 and RFC3325.

**Transport protocol:** Configure the transport protocol, TCP or UDP

**Ban anonymous call:** Configure whether to ban anonymous call.

**Enable strict proxy:** Compatible with special server. (Using source address of opposite side when return message, no longer use the address in via field).

**Subscribe for MWI:** After successful registration, you can subscribe to information, such as someone else's status or voice mail and so on.

**Enable report:** Configure whether to support RFC3581, report mechanism is used in internal network, and requires a SIP server to support, it is used for keeping the NAT connect of the internal network and the external network.

---

**Enable PRACK:** Configure whether to support SIP-PRACK function (used by "Color Ring Back Tone") Recommend: Use the default

configuration.

**Convert URI :** When you send URI it will convert # to %23.

**Enable DNS SRV:** Configure whether to enable RFC2782 protocol edition.

Set to make quotation mark to display name as the phone sends out signal, in order to be compatible with server.

**Enable display name quote:** Set to make quotation mark to display name as the phone sends out signal, in order to be compatible with server.

**Enable STUN:** Enable/Disable SIP STUN.

---

**Enable BLF List:** Enable/Disable BLF List.

**BLF List number:** Input the URL of BLF List.

**Enable session timer:** Enable/Disable session timeout.

**Session timeout(s):** Set the time of session timeout.

**Backup server address:** Configure a backup server address. When the primary server is not

---

connected, you can use the backup server for calling communications (The backup server can be connected only when the primary server cannot connect); When the primary server is connected, the phone will automatically switch back to the primary server to communicate.

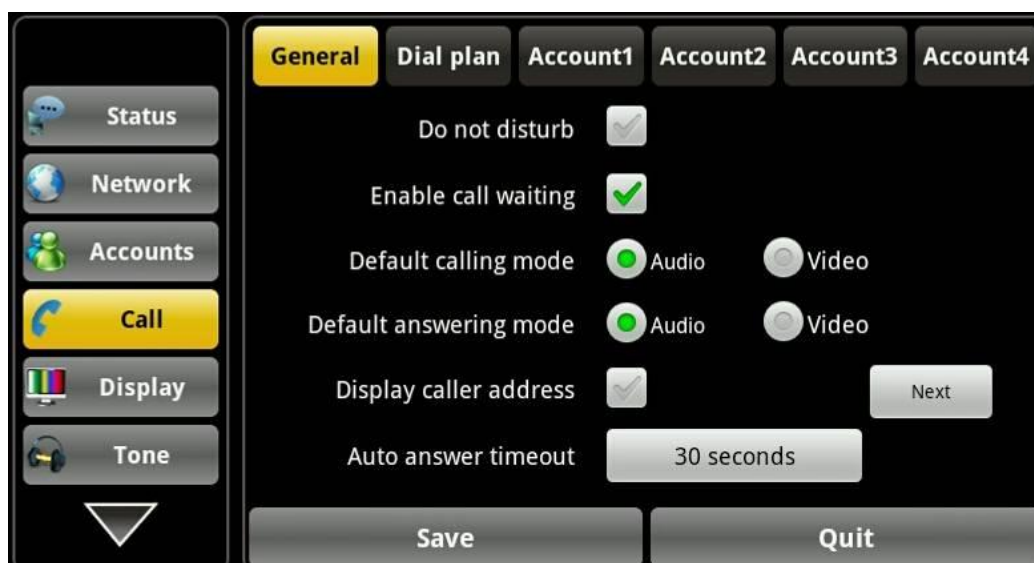

**Backup server port:** Configure the backup server port.

## Call

After configuring the parameters of each interface, you can click "Save" button to save successfully.

## General

Tap "Call" ----> "General" interface. After configuring the parameters, you can click "Save" button to save successfully.

General interface 1

Configuration	Meaning
<b>General</b>	<p><b>Do not disturb:</b> Enabled the "DND", the phone will not allow incoming phone calls, but the notification about missed calls will be displayed at the status bar.</p> <p><b>Enable call waiting:</b> Set whether to enable the call waiting function.</p>

**Default calling mode:** Set the default call mode of the phone, Audio or Video.

**Default answering mode:** Set the default answer mode of the phone, Audio or Video.

**Display caller address:** After enabling the call attribution show, and when a call comes in, the incoming interface can display the attribution information of the caller's number.

**Auto answer timeout:** Set the "Auto answer timeout".

### General interface 2

**Enable password dial:** Enable/Disable password dial.

**Password dial prefix:** Input the password prefix, such as 138.

**Password length:** Input the length of number you want to hide. Such as 3.

So if your enable the **password dial** and want to dial the number 13812054896, You set the **password prefix** is 138, **password length** is 3, then when you dial the number, the screen will show 138\*\*\*\*\*54896.

**Hide DTMF:** Select "All " or "Delay" or "Disabled".

- If you select "Disabled", then when you use DTMF to input number, the

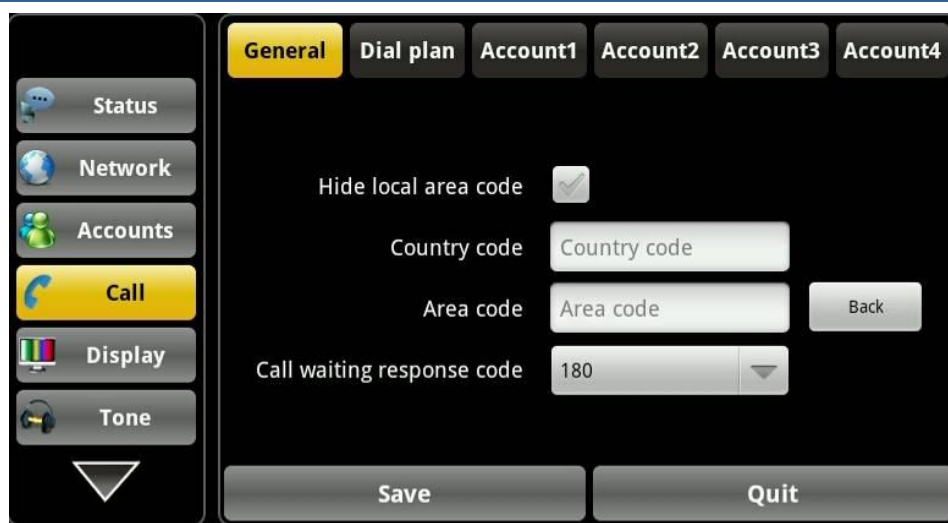

number will display as what you input.

- If you select "All ", then when you use DTMF to input number, the number will all display as \*.
- If you select "Delay", then when you use DTMF to input number, the number will delay to display as \*.

**Auto answer mode:**

**Hansfree:** Use Hadsfree to auto answer.

**Headset:** Use Headset to auto answer.

**General interface 3**

**Hide local area code:** After enabled, when there is a call, the screen will not display the local area code.

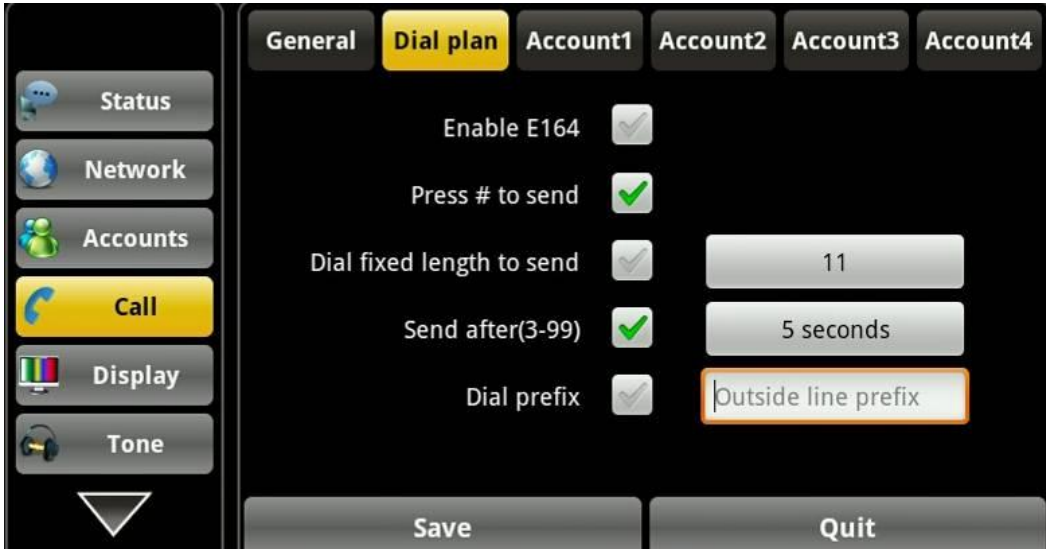

**Country code:** Input the Country code, e.g. China is 86

**Area code:** Input the Area code, e.g. Beijing is 10.

**Call waiting response code:** Choose call waiting response code, 180 or 182.

**Dial plan**

Tap "Call"----> "Dial plan" interface. After configuring the parameters, you can click "Save" button to save successfully.

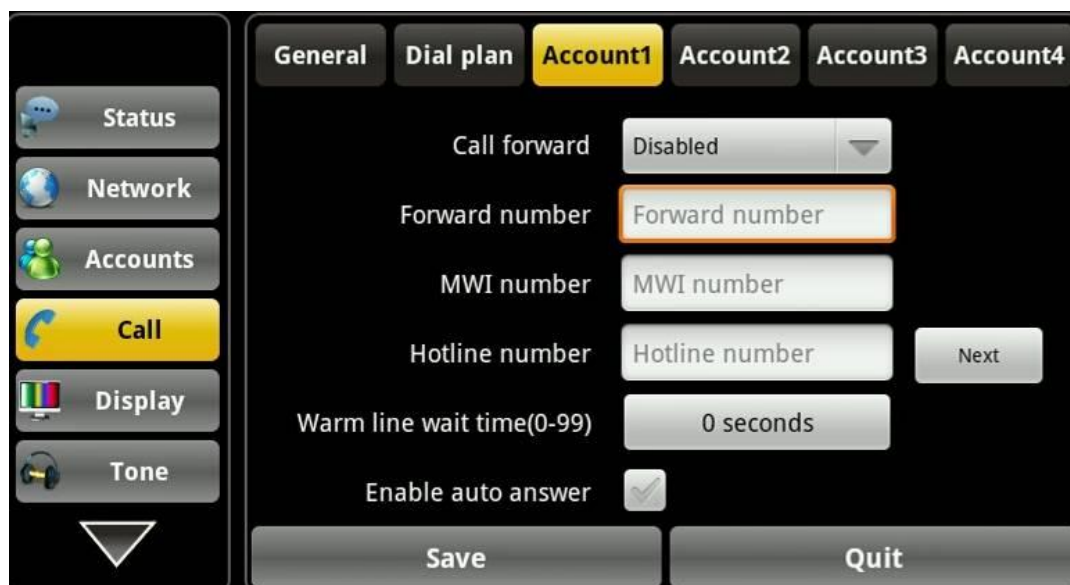

**Dial plan interface**

Configuration item	Meaning
<b>Dial plan</b>	<p><b>Enable E164:</b> Enable/Disable E164. After it is enabled, it will directly dial numbers according with E164 rules.</p> <p><b>Press # to send:</b> Enable/Disable. After enabling the function, input the number end with "#" in the non-pre-dial mode, it will directly dial the phone number.</p> <p><b>Dial fixed length to send:</b> Enable/Disable. After enabling the function, inputting the number of specified length in the non-pre-dial mode will make the call directly.</p> <p><b>Send after (3-99):</b> Enable/Disable. After enabling the function, input the number in the non-pre-dial mode, it will dial the phone number in the specified time.</p> <p><b>Dial prefix:</b> Enable/Disable. After enabled the function, it will be automatically added the outside line prefix number before the outgoing number when you are going to call.</p> <p><b>Method to use the prefix: Example</b>                      If you set the prefix is 135856, and you want to dial the number 13585679801. Then when you dial the number, you can long press 0, when the "+" appears, you can just input 79801 and send the number, the "+79801" is the numb you input, but you can see the dialing number is 13585679801.</p>

## Account

Tap "Call "----> "Account 1, 2, 3, 4". After configured the parameters, you can click "Save" button to save successfully.

**Account interface 1**

Configuration item	Meaning
<b>Account</b>	<p><b>Call forward:</b> Enabled/Disable Call forward function. (You can select "Always" , "No answer" , "Busy" and "Close forward")</p> <p><b>Forward number:</b> Set the forward number for each SIP line.</p> <p><b>MWI number:</b> Set the voicemail number for each SIP line.</p> <p><b>Hotline number:</b> Set the hotline number for each SIP line.</p> <p><b>Warm line wait time (0-99):</b> Set the waiting time of the hotline number after hooking off ,pressing the speaker or headset , if the timeout number is not set, the default time is 0, and then it will immediately call the hotline number.</p> <p><b>Enable auto answer:</b> Whether to enable "Auto answer" function.</p>

Account interface 2

Configuration item	Meaning
<b>Account</b>	<p><b>Display PAI number:</b> Whether to display the PAI number. Support the standard ISP number, if not enabled, when there is a coming call, the screen only displays the last few digitals.</p> <p><b>User is phone:</b> After enabling, you can input the phone number directly; or you must input the country code and the area code.</p>

## Display

Tap "Display" ----> "Display" interface. After configuring the parameters, you can click "Save" button to save successfully.

## Screen

Tap "Display settings"----> "Screen saver" interface. After configuring the parameters, you can click "Save" button to save successfully.

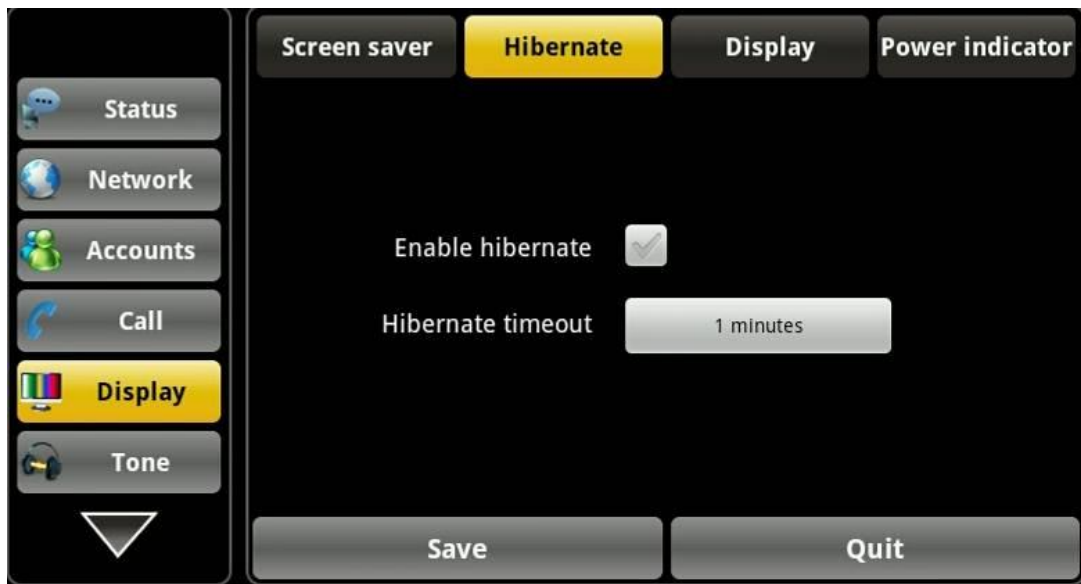

**Screen saver interface**

<b>Configuration item</b>	<b>Meaning</b>
<b>Screen saver</b>	<p><b>Mode:</b> Enable/Disable. After enabling this function, the LCD screen will be the state of the screen saver mode after the specified time. There are three types of screen saver ("Disabled", "Album" and "Clock") for you to choose.</p> <p><b>Timeout:</b> Input the waiting time after enabling the screen saver mode, the default unit is minute.</p> <p><b>Deactive period:</b> Set prohibit operation period and other related parameters.</p>

## Hibernate

Tap "Display settings" ----> "Hibernate" interface. After configuring the parameters, you can click "Save" button to save successfully.

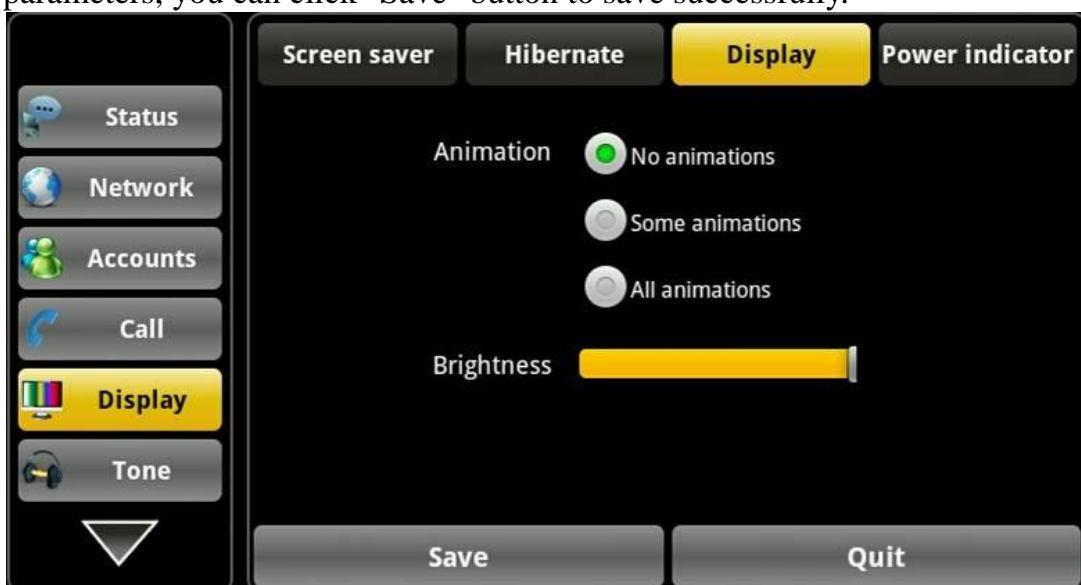

**Hibernate interface**

Configuration item	Meaning
<b>Hibernate</b>	<p><b>Enable hibernate:</b> Enable/Disable. After enabling this function, the LCD screen will be the state of the hibernate mode after the specified time.</p> <p><b>Hibernate timeout:</b> Input the waiting time after enabling the hibernate mode, the default unit is minute.</p>

## Display

Tap "Display settings" ----> "Display" interface. After configuring the parameters, you can click "Save" button to save successfully.

**Display interface**

Configuration item	Meaning
<b>Display</b>	<p><b>Animation:</b> Set the window animation mode, there are three kinds of mode ("No animations", "Some animations" and "All animations") for you to choose.</p> <p><b>Brightness:</b> Regulate brightness of screen display.</p>

Configuration item	Meaning
<b>Display</b>	<p><b>Power state:</b> Enable/Disable the Power LED.</p> <p><b>Missed calls:</b> Enable missed calls and power state is enabled, when there is a missed call, the Power LED will blink.</p> <p><b>MWI:</b> Enable MWI and power state is enabled, when there is a MWI, the Power LED will blink.</p> <p><b>SMS:</b> Enable SMS and power state is enabled, when there is a message, the Power LED will blink.</p> <p><b>Push-News:</b> Enable Push-News and power state is enabled, when there is a push-news, the Power LED will blink.</p>

## Sound

Tap "Settings" ----> "Sound" interface. After configuring the parameters, you can click "Save" button to save successfully.

## Tone

Tap "Sound settings" ----> "Tone" interface. After configuring the parameters, you can click "Save" button to save successfully.

**Tone interface**

Configuration item	Meaning
<b>Tone</b>	<p><b>Phone ringtone:</b> Set telephone ringtone of incoming calls.</p> <p><b>Notification ringtone:</b> Set notification ringtone of the telephone.</p> <p><b>Audible touch tones:</b> Enable/Disable. After enabling the function, when you use a dialing keyboard it can play sound.</p> <p><b>Audible selection:</b> Enable/Disable. After enabled the function, when you select the screen it can play sound.</p>

## Volume

Tap "Sound" ----> "Volume" interface. After configuring the parameters, you can click "Save" button to save successfully.

**Volume interface**

<b>Configuration item</b>	<b>Meaning</b>
<b>Volume</b>	<p><b>Ring volume:</b> Adjust the volume size of incoming call.</p> <p><b>Notification volume:</b> Adjust the volume size of notification.</p> <p><b>Media volume:</b> Adjust the volume size of media.</p> <p><b>Enable silent mode:</b> Set whether to enable Silent mode. After enabling the function, all sounds will not take effect expect media volume and alarm clock.</p>

## Language

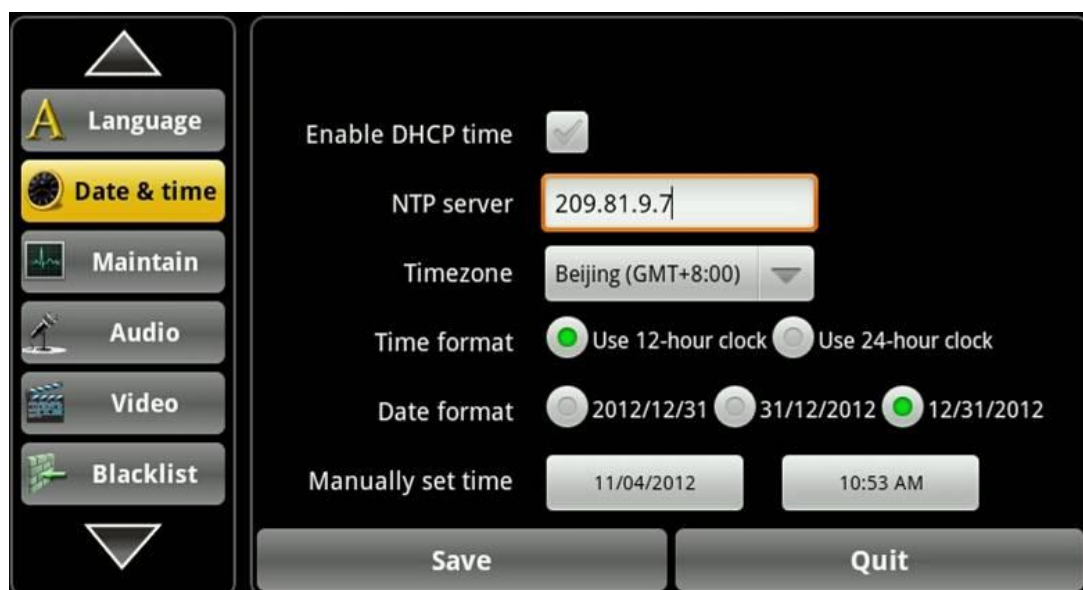

Tap "Settings" ----> "Language" interface. After configuring the parameters, you can click "Save" button to save successfully.

Language interface

## Date & time

Tap "Settings" ----> "Date time" interface. After configuring the parameters, you can click "Save" button to save successfully.

Date & time interface

Configuration item	Meaning
<b>Date &amp; time</b>	<p><b>Enable DHCP time:</b> Enable/Disable DHCP time. After enabling, the phone will automatically synchronize the network time in a certain period of time.</p> <p><b>NTP server:</b> Configure SNTP server address of the phone to get the current time.</p>

**Timezone:** Select the current time zone.

**Time format:** Select the current time format. You can choose "Use 12-hour format" or "Use 24-hour format."

**Date format:** Select the current date format. There are three types for you to choose ("Year - Month - Day", "Day - Month - Year" or "Month - Day - Year").

**Manually set time:** You can manually set the current date and time.

## Maintain

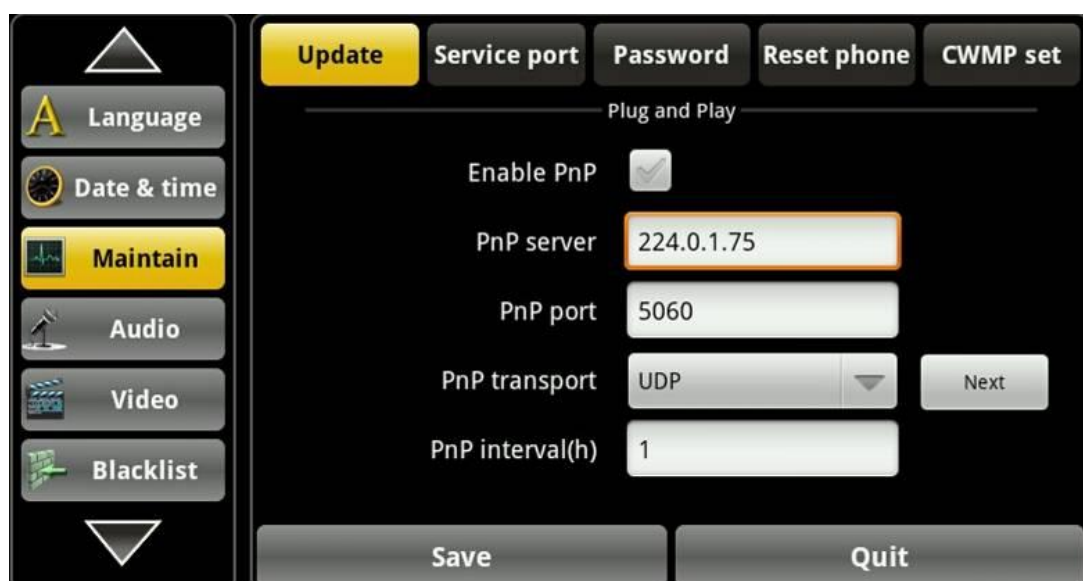

### Update

Tap "Settings" ----> "Maintain" ----> "Update" interface. After configuring the parameters, you can click "Save" button to save successfully.

Fanvil endpoint supports PnP and DHCP and Phone Flash to obtain the parameters. The PnP and DHCP and Phone Flash are all deployed, endpoint will go by the following process to try to obtain the server address and other parameters, when it boots up:

DHCP option → PnP server → Phone Flash

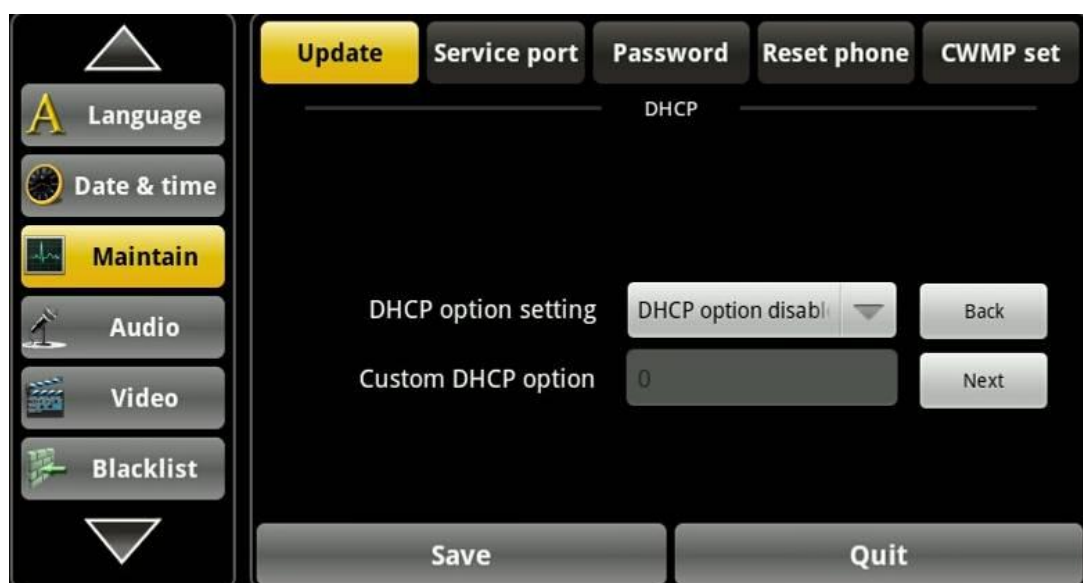

Tap "Update", enter the PNP interface:

**Plug and Play interface**

Support Common CFG file and MAC-Oriented CFG file and ID-Oriented CFG file auto provision. The endpoints download Common CFG file firstly, and then download MAC-Oriented CFG file or ID-Oriented file.

Configuration	Meaning
<b>Plug and play</b>	<p><b>Enable PNP:</b> Enable/Disable PNP. Enable PnP by selecting it, then the phone will send SIP SUBSCRIBE messages to a multicast address when it boots up. Any SIP server understanding that message will reply with a SIP NOTIFY message containing the Auto Provisioning Server URL where the phones can request their configuration.</p> <p><b>PNP server:</b> Input the PNP Server name. The default is 224.0.1.75. It depends on your environment.</p> <p><b>PNP port:</b> Input the PNP port number.</p> <p><b>PNP transport:</b> Select the transport protocol, "TCP" or "UDP"</p> <p><b>PNP interval (h):</b> Input automatic update interval. Unit is hour.</p>

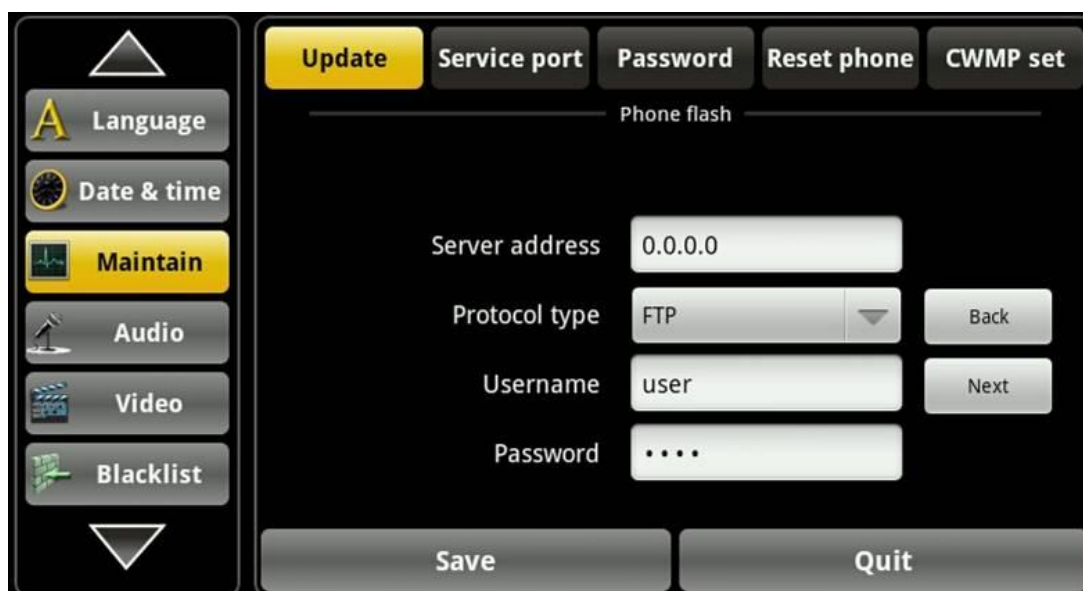

#### Update-DHCP

Support Common CFG file and MAC-Oriented CFG file and ID-Oriented CFG file auto provision. The endpoints download Common CFG file firstly, and then download MAC-Oriented CFG file or ID-Oriented file.

Configuration	Meaning
<b>DHCP</b>	<p><b>DHCP option setting:</b> Select "DHCP Option 43", "DHCP Option 66" or "DHCP Option Custom".</p>

**Custom DHCP option:** After select "Custom DHCP option", you need to input the DHCP value. A valid Custom DHCP Option is from 128 to 254. The Custom DHCP Option must be in accordance with the one defined in the DHCP server.

### Update-Phone flash

Support Common CFG file and MAC-Oriented CFG file or Custom CFG file. If customer deploys Custom CFG file name in the web page, the endpoint will download Custom CFG file. If customer doesn't deploy Custom CFG file name, the endpoint will download MAC-Oriented.

Configuration	Meaning
<b>Phone flash</b>	<p><b>Server address:</b> Set FTP/TFTP/HTTP server IP address for auto update. The address can be IP address or Domain name with subdirectory.</p> <p><b>Protocol type:</b> Select Protocol, including "FTP", "TFTP", "HTTP", and "HTTPS".</p> <p><b>Username:</b> Set FTP server Username. System will use anonymous if username keep blank.</p> <p><b>Password:</b> Set FTP server Password.</p>

### Update--Phone flash 2

#### Phone flash2

**Config file name:** Input MAC-Oriented configuration file or defined configuration name of user.

**Commen cfg encrypt key:** Input the Common Encrypt Key, if the Common Configuration file is encrypted. The keys must be 64 characters and the supported characters are: 0 ~ 9, A ~ F, a ~ f.

**Config encrypt key:** Input the Encrypt Key, if the configuration file is encrypted.

**Update mode:** Different update modes:

1. Disable: means no update
2. Update after reboot: means update after reboot.
3. Update at time interval: means periodic update

**Update interval time(h):** If you select Time

Interval, you should fill out the update time, unit is hour.

#### Service port

Tap "Maintain"---->"Service port" interface. After configured the parameters, you can click "Save" button to save successfully.

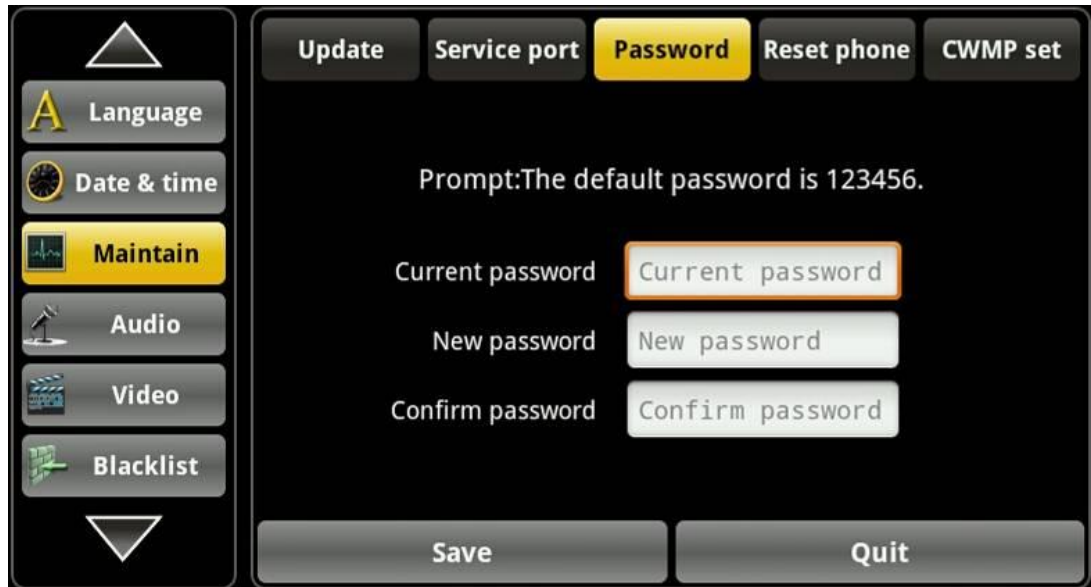

**Service port interface**

<b>Configuration</b>	<b>Meaning</b>
<b>Service port</b>	<p><b>Web server type:</b> Select "HTTP" or "HTTPS".                      After selecting one server, you can use the selected server to login the telephone's web page.                      Such as: https://192.168.1.20</p> <p><b>HTTP port:</b> Input server port, default is 80.</p>

## Password

Tap "Maintain"---->"Password" interface. After configured the parameters, you can click "Save" button to save successfully.

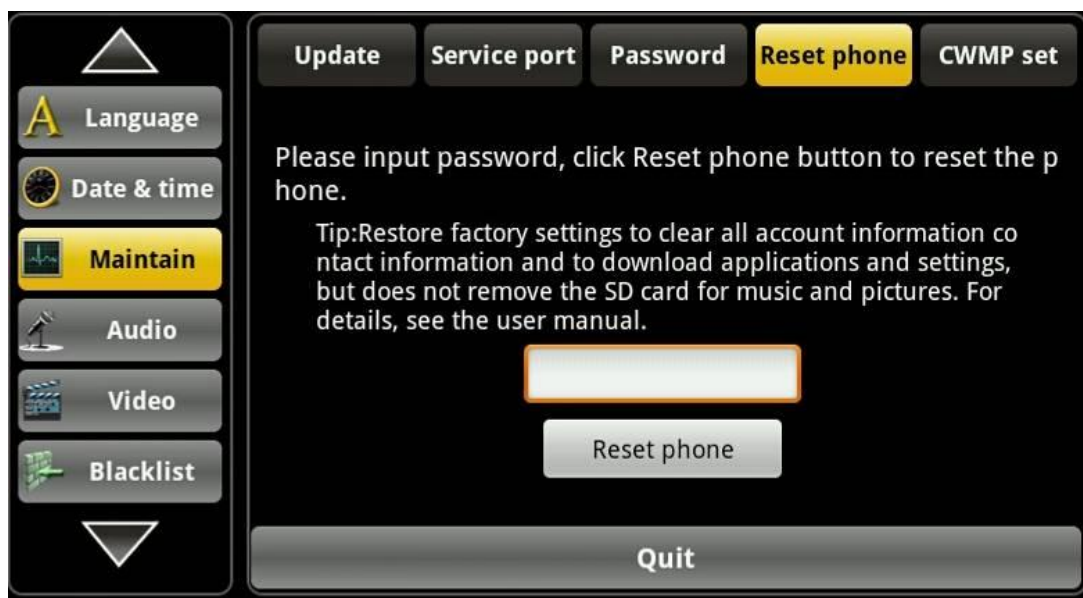

**Password interface**

<b>Configuration</b>	<b>Meaning</b>
<b>Password</b>	<p><b>Current Password:</b> Default password: 123456.</p> <p><b>New password:</b> Input your new password.</p> <p><b>Confirm password:</b> Input your new password again.</p>

## Reset phone

Tap "Maintain"----> "Reset phone" interface. After configured the parameters, you can click "Reset phone" button to reset successfully.

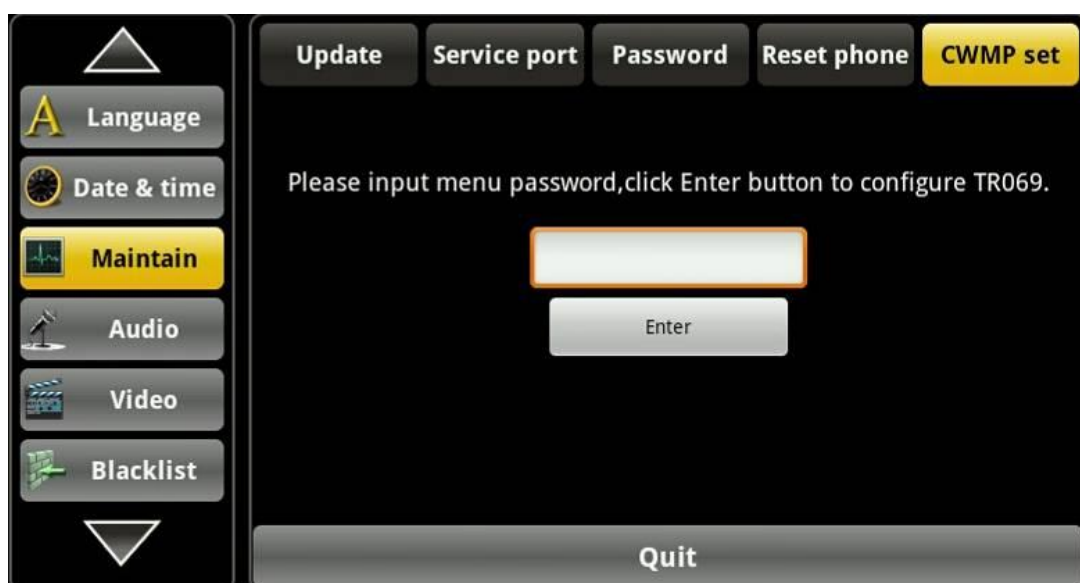

**Reset phone interface**

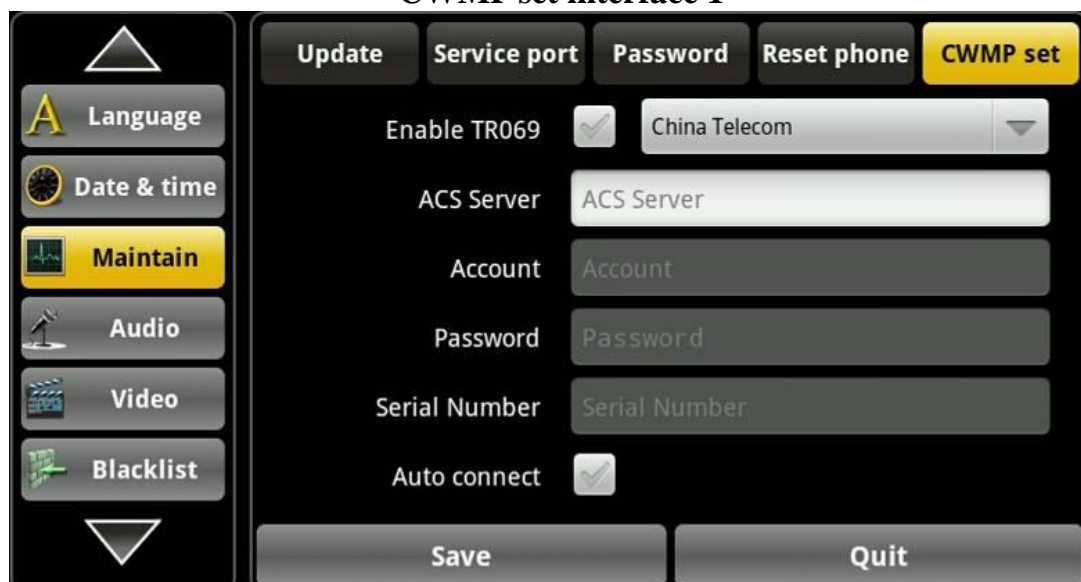

Configuration	Meaning
Reset phone	<b>Input the password, default is 123456.</b> <b>Reset phone:</b> Click "Reset phone" to reset.

## CWMP set

Tap "Maintain"----> "CWMP set" interface. You can input the password to enter the configuration interface.

CWMP set interface 1

CWMP set interface 2

Configuration	Meaning
Reset phone	<b>Enable TR069:</b> Enable/Disable TR069, you can select China Telecom or Normal.

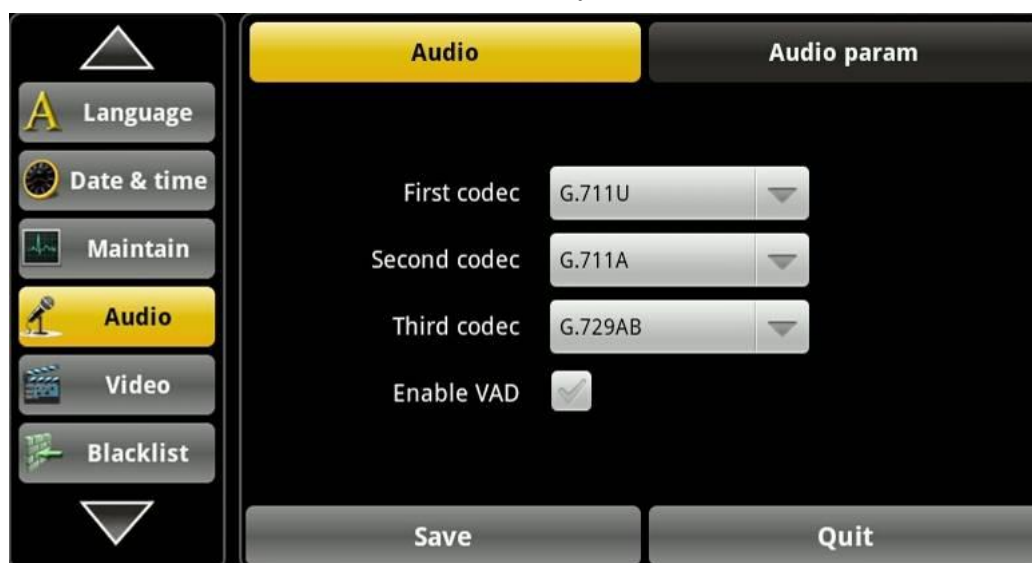

**ACS Server:** Input the ACS Server address.  
**Account:** Input the ACS Server Account.  
**Password:** Input the ACS Server password of the account.  
**Serial Number:** The serial number is specified by the server.  
**Auto connect:** After Enabling TR069 Auto Login, you can input the account and password.

## Audio

Touch "Settings" ----> "Audio", enter the detailed view.

## Audio

Touch "Audio"----> "Audio" interface. After configuring the parameters, you can click "Save" button to save successfully.

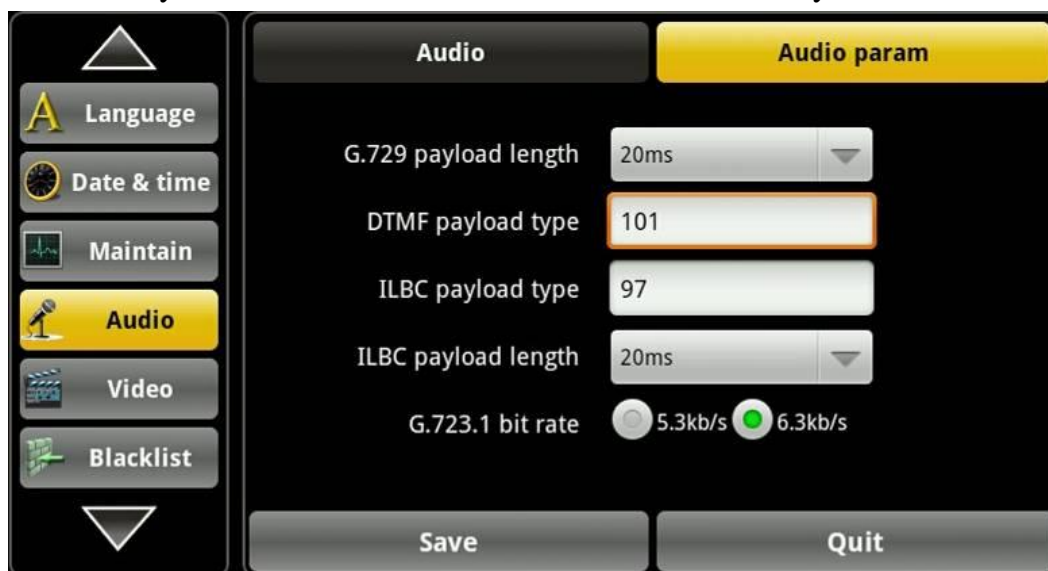

**Audio interface**

Configuration item	Meaning
<b>Audio</b>	<p><b>First codec:</b> Set the first priority in the use of voice coding. Default is G.711U.</p> <p><b>Second codec:</b> Set the second priority in the use of voice coding. Default is G.711A.</p> <p><b>Third codec:</b> Set the third priority in the use of voice coding. Default is G.729AB.</p> <p><b>Enable VAD:</b> Whether to enable VAD. (Voice Activity Detection); If you enabling VAD function,</p>

then the G.729 payload length cannot be set greater than 20ms.

## Audio param

Touch "Audio"----> "Audio param" interface. After configuring the parameters, you can click "Save" button to save successfully.

Audio param interface

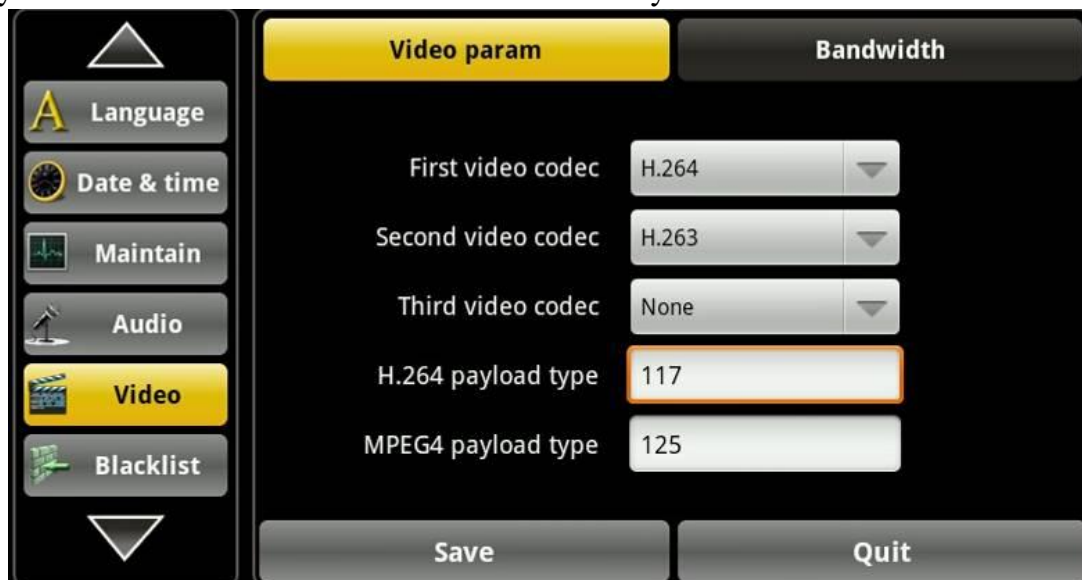

Configuration item	Meaning
Audio param	<p><b>G729 payload length:</b> Set G729 codec payload length.</p> <p><b>DTMF payload type:</b> Set DTMF payload type, values between 96 and 127.</p> <p><b>ILBC payload type:</b> Set ILBC payload type, values between 96 and 127.</p> <p><b>ILBC payload length:</b> Set ILBC payload length.</p> <p><b>G723.1 bit rate:</b> Set the rate of G723.1, you can choose 5.3kb / s or 6.3kb / s.</p>

## Video

Touch "Settings" ----> "Video" and enter the settings interface.

## Video param

Touch "Video"----> "Video param" interface. After configuring the parameters, you can click "Save" button to save successfully.

**Video param interface**

Configuration item	Meaning
<b>Video param</b>	<p><b>First video codec:</b> Set the first priority in the use of video coding.</p> <p><b>Second video codec:</b> Set the second priority in the use of video coding.</p> <p><b>Third video codec:</b> Set the third priority in the use of video coding.</p> <p><b>H.264 payload type:</b> Set payload type of H.264, value between 96 and 127.</p> <p><b>MPEG4 payload type:</b> Set payload type of Mpeg4, value between 96 and 127.</p>

## Bandwidth

Touch "Video"----> "Bandwidth" interface. After configuring the parameters, you can click "Save" button to save successfully.

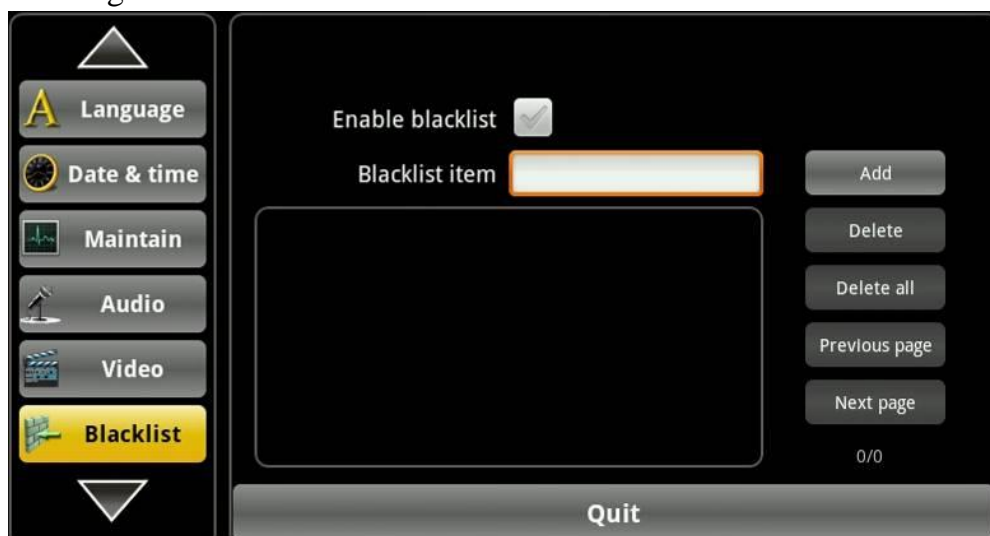

**Bandwidth interface**

Configuration item	Meaning
<b>Bandwidth</b>	<p><b>Video bit rate:</b> Set receiving video bandwidth in video calls. You can choose 9 kinds of video bandwidth types ("64Kbps", "192Kbps", "256Kbps", "384Kbps", "512Kbps", "768Kbps", "1Mbps", "1.6Mbps", or "2Mbps").</p> <p><b>Video resolution:</b> Set video encoding resolution in a video call. You can choose 4 types of video resolution ("QCIF (176*144)", " CIF (352*288)" 4CIF (704*576)").</p>

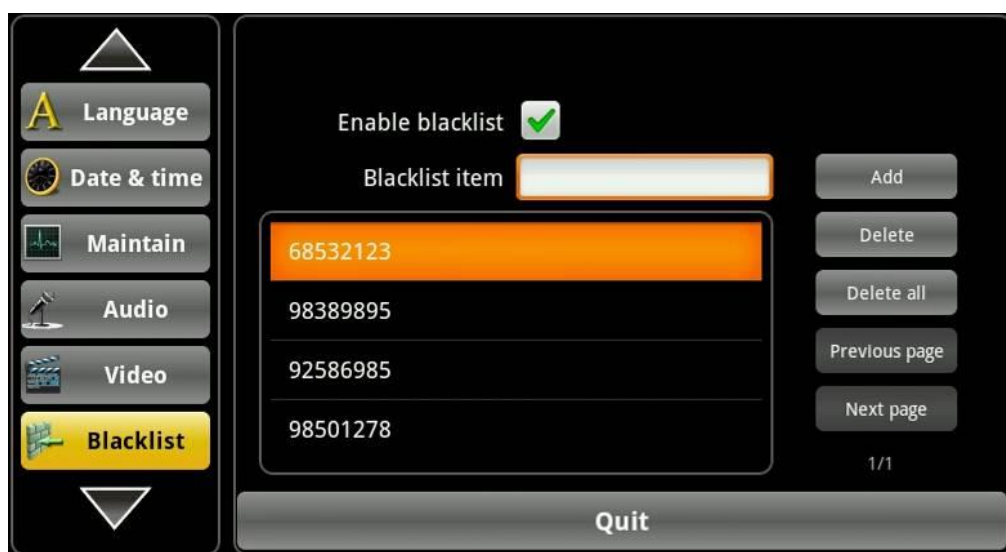

## Settings

Tap "Settings" ----> "Blacklist" interface. Enable blacklist.

### Blacklist interface

### Delete selected status interface

Configuration item	Meaning
<b>Blacklist</b>	<p><b>Enable blacklist:</b> Whether to enable the blacklist. After enabling the function, there will be a notification note in the status bar. When a number is added to the firewall, the telephone will automatically reject all incoming calls of this number, at the same time there won't be any note.</p> <p><b>Blacklist item:</b> Input the number you want to add to the Blacklist.</p> <p><b>Add:</b> Add the number into "Blacklist".</p> <p><b>Delete:</b> Select one of telephone information, click the "delete" button to remove this number from the Blacklist.</p> <p><b>Delete All:</b> Delete all phone number from the Blacklist.</p> <p><b>Next page:</b> When the "Blacklist" number is more than one page, you can tap "Next page" button.</p> <p><b>Previous page:</b> When the number you added is more than one page and then you can tap "Previous page" button.</p> <p><b>M/N:</b> M represents the current number of pages; N represents the total number of pages.</p>

## Action url

Configuration item	Meaning
--------------------	---------

**Active URI Limit IP** : Specify the server IP that remote control phone for corresponding operation.

**Action url** : Specify the Action URL that Record the operation of phone, send these corresponding information to server, url : http://InternalServer /FileName.xml? ( InternalServer is server ip , FileName is name of xml that contains the action message )

# Phone Application

## Phone

This terminal support VoIP to communicate with each other.

### Dialing

#### 1. Dialing on the dialer view

You can directly dial a phone number.

1. Press the phone icon in the idle.
2. Select the line to dialing (SIP1, SIP2, SIP3, SIP4) .
3. Enter telephone number on the keypad, if it is wrong, you can select  to delete. If you want to delete the entire input, please long press  .
4. To make a call, perform the following steps:
5. Enter the full number, tap the "Audio" or "Video" button; In the talking

state, the icon  will be shown.

#### 2. Use the memory key

## Sound & display

Tap "Basic settings", then select "sound & display" to switch to sound & display interface.

Configuration item	Meaning
<b>Volume Set</b>	<p><b>Silent mode:</b> Set whether to enable Silent mode. After enabling the function, all sounds will not take effect expect media volume and alarm clock.</p> <p><b>Ringer volume:</b> Adjust the volume size of</p>

	incoming call.
	<b>Media volume:</b> Adjust the volume size of media.
<b>Ring Set</b>	<b>Phone ringtone:</b> Set telephone ringtone of incoming calls. <b>Notification ringtone:</b> Set notification ringtone of the telephone.
<b>Tone Set</b>	<b>Audible touch tones:</b> Enable/Disable. After enabling the function, when you use a dialing keyboard it can play sound. <b>Audible selection:</b> Enable/Disable. After enabling the function, when you select the screen it can play sound.
<b>Screen Saver Set</b>	<b>Enable screen saver:</b> Enable/Disable. After enabling this function, the LCD screen will be the state of the screen saver mode after the specified time. <b>Screen saver timeout:</b> Input the waiting time after enabling the screen saver mode, the default unit is minute. <b>Screen saver mode:</b> There are three types of screen saver ("Close LCD", "Album" and "Clock") for you to choose. <b>Prohibit operation period:</b> Set prohibit operation period and other related parameters.
<b>Hibernate Set</b>	<b>Enable hibernate:</b> Enable/Disable. After enabling this function, the LCD screen will be the state of the hibernate mode after the specified time. <b>Hibernate timeout:</b> Input the waiting time after enabling the hibernate mode, the default unit is minute.
<b>Display Set</b>	<b>Animation:</b> Set the window animation mode, there are three kinds of mode ("No animations", "Some animations" and "All animations") for you to choose. <b>Brightness:</b> Regulate brightness of screen display.
<b>U Disk notifications</b>	Enable/Disable. After enabling, it will play the corresponding notification alert tone when you install and uninstall the U-Disk.

**Appendix:**

1. If you enable hibernation and screen saver at the same time, the phone will first enter the screen saver, Then enter the state of dormancy.
2. To introduce the Screen saver prohibit operation period parameters.

**Use screen saver prohibit operation period:**

If enabled, screen saver will not take effect at the specified time, it will close

LCD directly.

**The first period start time:** Set the first period start time.

**The first period end time:** Set the first period end time.

**The second period start time:** Set the second period start time.

**The second period end time:** Set the second period end time.

## Configuration management

Tap "Settings", and then select "Configuration management" to switch to Configuration management interface.

---

Configuration item	Meaning
<b>Auto provision</b>	<p><b>Server:</b> Input the upgrade server address.</p> <p><b>Protocol:</b> Select the protocol used by the automatic upgrade, Include: FTP, HTTP and TFTP.</p> <p><b>Account:</b> Input the upgrade server account. (<b>Note:</b> It is only used when using the FTP protocol.)</p> <p><b>Password:</b> Input the upgrade server password. (<b>Note:</b> It is only used when using the FTP protocol.)</p> <p><b>File name:</b> Input the filename needed to be upgraded.</p> <p><b>Time interval:</b> Input automatic update interval.</p> <p><b>Mode:</b> select the upgrade modes: "Disable", "After reboot", "Time interval".</p> <p><b>Manual upgrade:</b> Manual to upgrade.</p>
<b>Network phonebook</b>	<p><b>Server:</b> Input the server address of the network phonebook.</p> <p><b>File name:</b> Configure the network phonebook name that is consistent with the file name on the server, otherwise, download will be failed.</p> <p><b>Refresh time:</b> Configure the interval time to update data of the phone from the server, the unit is hour.</p>
<b>TR-069</b>	<p><b>Server:</b> Input the server address of TR069, in TR069 interface press any DTMF button can pop up an input box of entering the server address.</p> <p><b>Account:</b> Input the account that used in registering TR069 server.</p> <p><b>Password:</b> Input the password that used in registering TR069 server.</p> <p><b>Automatic login:</b> Enable/Disable. After enabling, it will use the saved user name and password after the phone reboot and do not need to manually input.</p> <p><b>Local sequence number:</b> Display the local sequence number of TR069.</p>

**Attach:**

You must make a version file, that is version.txt, before automatic upgrade the applications, as follows:

Version: 1.0.837.35.64

Server: 192.168.1.249

Image: home.tar.gz

Protocol: ftp

User: ad

Password: ad

Version: Phone version, this version can be arbitrarily input. But the version number cannot be same with the telephone version number, otherwise it will not upgrade.

Server: Upgrade the server address that is using.

Image: The file that need to be updated, the suffix name must use tar.gz.

Protocol: Upgrade the protocol that is using, For example ftp, tftp, http etc.

User: According to the protocol, fill in the corresponding user name.

Password: According to the protocol, fill in the corresponding password.

1. In the automatic upgrade interface, you can configure corresponding parameters, the file name must be input with version.txt, and the other settings, according to the configuration on the above form, then upgrade.
2. After the upgrade is completed, telephone notification bar will have the upgrade prompt notification; Clicking it will pop up a dialog box to ask whether to upgrade the new version, you can click "OK", then update.

## Language & keyboard

Tap "Basic settings", then select "language & keyboard" to switch to language & keyboard interface.

Configuration item	Meaning
Select locale	Set the phone language environment, the default selection is English.
Text settings	Set the Android keyboard, Google Input Method, Penpower Input Method etc that the phone uses.

**Be careful:**

Users through the Android market to install third party input method will be automatically added to the language and keyboard settings.

## Date & time

Tap the "Basic Settings", and then choose "Date & time" switch to the date and

time settings interface.

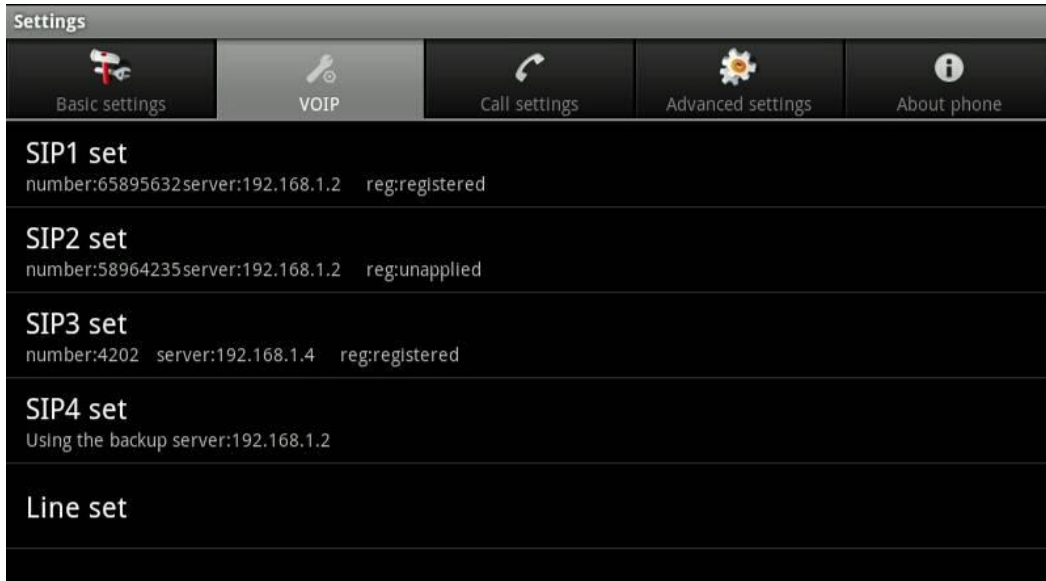

<b>Configuration item</b>	<b>Meaning</b>
<b>Auto</b>	When enabled, the phone will automatically get the current time through the sntp server.
<b>Automatic timing server Settings</b>	Configuring the phone to get the sntp server address at the current time.
<b>Set the date</b>	Set the current date.
<b>Select time zone</b>	Select the current time zone.
<b>Set the time</b>	Set the current time manually.
<b>Use the 24-hour format</b>	When enabled, the time will be displayed in a 24-hour format.
<b>Select the date format</b>	Select the current date format. There are three types for you to choose ("Year - Month - Day", "Day - Month - Year" or "Month - Day - Year").

**Note:**

1. You need to configure the available time server address and select the corresponding time zone after enabling "Auto", at the same time you must ensure that the phone is in network status, or it cannot get the correct time.
2. After enabling "Auto", you cannot set the time and date manually.

## VoIP

Tap "Settings" and select "VoIP Settings" to switch to VoIP setup interface.

Configuration item	Meaning
<b>SIP set</b>	Configure the corresponding registration parameter of each sip account, such as sip server address and so on, then click "OK" button after configuration is completed.
<b>Line set</b>	Configure the corresponding sip line of each line key on the phone keyboard.
<b>Voice</b>	Configure voice parameters in the process of calls, such as voice coding, whether to enable VAD, etc.
<b>Video</b>	Configure video parameters in the process of video calls, such as encoding resolution, frame rate, etc.
<b>QoS</b>	<b>DiffServ enable:</b> Configure whether to enable differentiated services. <b>DiffServ value:</b> Configure differentiated services parameter value, if you set normal level, the value is 0x00.
<b>Port</b>	<b>Media initial port(10000-60000):</b> Configure the media initial port, this port assigned as dynamic allocation. (Size 10000--60000) <b>Media port quantial (100-400):</b> Configure the maximum number of RTP port allocated, default value is 200.

**Attachment:**

**SIP registration parameters introductions:**

Configuration item	Meaning
--------------------	---------

<b>Server</b>	Set your SIP server address. It supports the address in the form of domain name.
<b>Account</b>	Set your SIP account.
<b>Password</b>	Set your SIP password.
<b>Phone Number</b>	Input the phone number assigned by your VoIP service provider. Phone will not register if there is no phone number configured.
<b>SIP register</b>	Enable/Disable register. <input type="checkbox"/> Disable register, <input checked="" type="checkbox"/> Enable register.
<b>Display name</b>	Configure the display name, it allows the English alphabet input (does not support Chinese).
<b>Server Name</b>	Configure the SIP register server name.
<b>Domain realm</b>	Configure the SIP domain name (the user can choose not to configure, the system will automatically configure).
<b>Server port</b>	Configure the SIP register server port.
<b>Register expire time (seconds)</b>	Configure the server register timeout(s), default 60 seconds. If the registration time of the server required is greater or less than the time of the phone to configure, telephone can automatically modify to the time limit that server recommended, and register again.
<b>DTMF mode</b>	Set DTMF mode, there are four types: <ul style="list-style-type: none"> <li>● DTMF_RELAY</li> <li>● DTMF_RFC2833</li> <li>● DTMF_SIP_INFO</li> <li>● DTMF_AUTO</li> </ul> Different server vendors can provide different models.
<b>RFC protocol edition</b>	Configure the protocol version of the phone. When your phone needs to communicate with gateway which uses SIP1.0, such as CISCO5300, you need to configure to RFC2543 to conduct normal communication. RFC3261 is used by default.
<b>RFC privacy edition</b>	Configure whether to use anonymous security call. It supports RFC3323 and RFC3325.
<b>Transport protocol</b>	Configure the transport protocol, TCP or UDP.
<b>Ban anonymous call</b>	Configure whether to ban anonymous call.
<b>Enable strict proxy</b>	Compatible with special server. (Using source address of opposite side when return message, no longer use the address in via field).

<b>Enable subscribe</b>	After successful registration, you can subscribe to information, such as someone else's status or voice mail and so on.
<b>Enable via rport</b>	Configure whether to support RFC3581, report mechanism is used in internal network, and requires a SIP server to support, it is used for keeping the NAT connect of the internal network and the external network.
<b>Enable prack</b>	Configure whether to support SIP-PRACK function (used by "Color Ring Back Tone")  Recommend: Use the default configuration.
<b>Enable uri convert</b>	When you send URI it will convert # to %23.
<b>Enable DNS SRV</b>	Configure whether to support RFC2782 protocol edition.
<b>Enable display name quote</b>	Set to make quotation mark to display name as the phone sends out signal, in order to be compatible with server.
<b>Enable CLIR</b>	Enable/Disable CLIR
<b>Use stun</b>	Enable/Disable SIP STUN;
<b>Stun Server</b>	Configure the SIP STUN server address.
<b>Stun port</b>	Configure the SIP STUN server port.
<b>Backup server</b>	Configure a backup server address. When the primary server is not connected, you can use the backup server for calling communications (The backup server can be connected only when the primary server cannot connect); When the primary server is connected, the phone will automatically switch back to the primary server to communicate.
<b>Backup server port</b>	Configure the backup server port.

**Voice coding settings parameters:**

<b>Configuration item</b>	<b>Meaning</b>
<b>First codec</b>	Set the first priority in the use of voice coding.
<b>Second codec</b>	Set the second priority in the use of voice coding.
<b>Third codec</b>	Set the third priority in the use of voice coding.
<b>Fourth codec</b>	Set the fourth priority in the use of voice coding.
<b>Fifth codec</b>	Set the fifth priority in the use of voice coding.
<b>Sixth codec</b>	Set the sixth priority in the use of voice coding.
<b>Seventh codec</b>	Set the seventh priority in the use of voice coding.
<b>Eighth codec</b>	Set the eighth priority in the use of voice coding.
<b>G729 payload length</b>	Set G729 codec payload length.
<b>DTMF payload type</b>	Set DTMF payload type, values between 96 and

	127.
<b>ILBC payload type</b>	Set ILBC payload type, values between 96 and 127.
<b>ILBC payload length</b>	Set ILBC payload length.
<b>G723 bit rate</b>	Set the rate of G723, you can choose 5.3kb / s or 6.3kb / s.
<b>VAD</b>	Silence detection; If you enabling VAD function, then the G.729 payload length cannot be set greater than 20ms.

**Video encoding settings parameters:**

<b>Configuration item</b>	<b>Meaning</b>
<b>Accept video mode</b>	Set accept video mode during a video call. Three ways for choice: "Manual accept video", "Auto accept video" and "Auto reject video".
<b>First video codec</b>	Set the first priority in the use of video coding.
<b>Second video codec</b>	Set the second priority in the use of video coding.
<b>Third video codec</b>	Set the third priority in the use of video coding.
<b>Video packet size</b>	Set the size of a single video packet during the video call
<b>H.264 payload type</b>	Set payload type of H.264, value between 96 and 127.
<b>Mpeg4 payload type</b>	Set payload type of Mpeg4, value between 96 and 127.
<b>Video resolution</b>	Set video encoding resolution during a video call, There are three ways for choice: QCIF, CIF and 4CIF.
<b>Media Bandwidth</b>	Set the media bandwidth of receiving video during a video call.

**Call settings**

Tap "Settings" and select "Call settings" switch to the Call interface.

Configuration item	Meaning
<b>Default calling mode</b>	Set the default call mode of the phone, Audio or Video.
<b>Default answering mode</b>	Set the default answer mode of the phone, Audio or Video.
<b>Blacklist</b>	Whether to enable the firewall. After enabling the function, there will be a notification note in the status bar. When a number is added to the firewall, the telephone will automatically reject all incoming calls of this number, at the same time there won't be any note. Click to view all the firewall numbers successfully added, at the same time, you can click a firewall number to delete in check process; you can also add and delete by the menu option.
<b>Do not disturb</b>	Enabled the "DND", the phone will not allow incoming phone calls, but the notification about missed calls will be displayed at the status bar.
<b>Call waiting</b>	Set whether to enable the call waiting function.
<b>Voicemail</b>	Set the parameters of the voicemail: <b>Check for voicemail:</b> Check which line enabled the voicemail, you can also enable it from here. <b>Number to dial for checking voicemail:</b> Set the phone number to listen the voicemail for each line. <b>Number for sending calls to voicemail:</b> Set the phone number of the voicemail for each line.
<b>No answer time</b>	Set no answer time. The default unit is second.
<b>Digital map</b>	<b>Use E164:</b> Enable/Disable E164. After it is enabled, it will directly dial numbers according

with E164 rules.

**Use # as dial key:** Enable/Disable. After enabling the function, input the number end with "#" in the non-pre-dial mode, it will directly dial the phone number.

**Use fixed length:** Enable/Disable. After enabling the function, inputting the number of specified length in the non-pre-dial mode will make the call directly.

**Dial with fixed-length :** Enter the number of fixed length(1-30)

**Use time out:** Enable/Disable.

**Dial timeout (3-99):** After enabling the function, input the number in the non-pre-dial mode, it will dial the phone number in the specified time.

**Dial plan prefix:** Enable/Disable. After enabled the function, it will be automatically added the outside line prefix number before the outgoing number when you are going to call.

**Outside line prefix:** Input the prefix number

---

**Hotline number**

**Hotline number:** Set the hotline number for each SIP line.

**Hotline timeout (0-99):** Set the waiting time of the hotline number after hooking off, if the number is not set, the default time is 0, and then it will immediately call the hotline number.

---

**Reveal incoming telephone place**

After enabling the call attribution show, and when a call comes in, the incoming interface can display the attribution information of the caller's number.

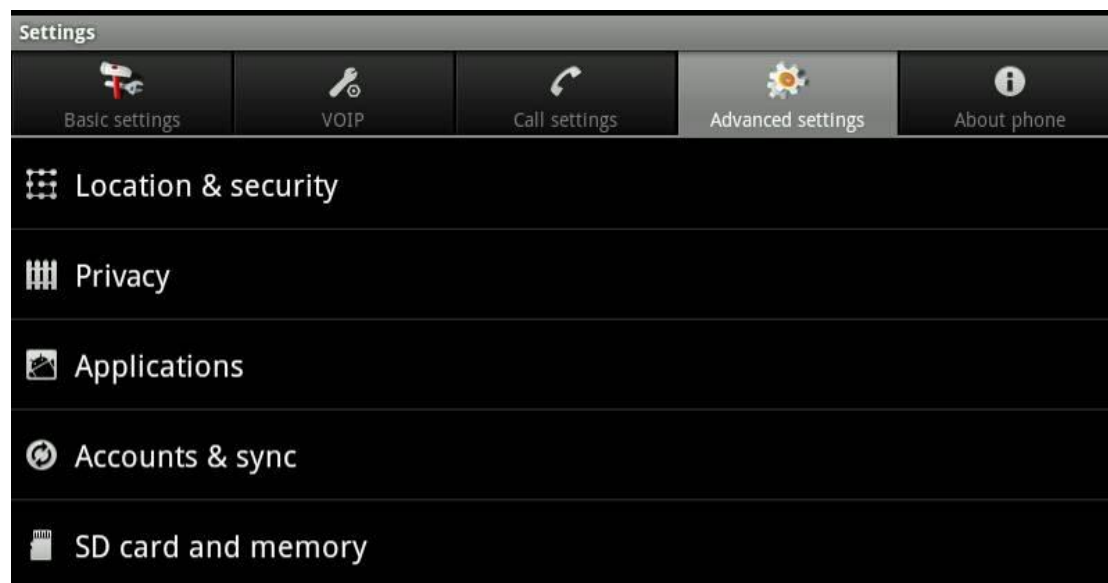

---

**Note:**

1. Enable "DND", "Auto answer" and "call forward" at the same time, the transfer effect priority is "DND" >> "Auto answer">> "call forward".
2. Digital Map : "Use E164", "End with #", "Use fixed length", "Use time out" are in effect under the condition of non pre-dial.

## Advanced settings

### Location & security

Tap "Advanced Settings" and then select "location and security" switch to the location and security settings interface.

Configuration item	Meaning
<b>Set menu password</b>	Set the password to enter the configuration items.
<b>Visible password</b>	Show password as you type.
<b>Use secure credentials</b>	Allow applications to access secure certificates and other credentials.
<b>Install from SD card</b>	Install encrypted certificates from SD card.
<b>Set password</b>	Set or change the credential storage password
<b>Clear storage</b>	Clear credential storage of all contents and reset its password.

Default configuration password: 123456.

### Privacy

Tap "Advanced Settings" and then select "Privacy" switch to the privacy settings interface.

Configuration item	Meaning
<b>Factory data reset</b>	Clear all user information on the phone, and the entire configuration to the default configuration.
<b>Reboot</b>	Click to restart the phone.

## Applications

Tap "Advanced Settings" and then select "Applications" switch to the application settings interface.

<b>Configuration item</b>	<b>Meaning</b>
<b>Unknown sources</b>	Allow install of non-Market application
<b>Manage applications</b>	Manage and remove installed application
<b>Running services</b>	View and control current running services
<b>Development</b>	Set options for application development USB debugging: Debug mode when USB is connected. Allow mock locations: Allow mock locations.

## Accounts & sync

Tap "Advanced Settings" and then select "Account & sync" switch to account and sync settings interface.

<b>Configuration item</b>	<b>Meaning</b>
<b>Background data</b>	Application can sync, send and receive data at any time.
<b>Auto-sync</b>	Application sync data automatically.
<b>Add account</b>	You can configure an Exchange account.

## SD card and memory

Tap "Advanced Settings" and then select "SD card and memory" switch to the SD card and memory settings interface.

<b>Configuration item</b>	<b>Meaning</b>
<b>Total space</b>	Display the size of the total storage capacity of the SD card.
<b>Available space</b>	Show the remaining available storage space size of SD card.
<b>Unmount SD card</b>	Must uninstall SD card at first, then you can remove it safely.
<b>Format SD card</b>	Format (erase) the SD card.
<b>Internal phone storage</b>	Show the total memory size of the phone.
<b>Available space</b>	Show the available phone memory space.

## Search

Tap "Advanced Settings" and then select search" switch to search settings interface.

Tap "search" to switch to search settings interface.

Configuration item	Meaning
<b>Google search settings</b>	Show page proposal: When enabled, it displays the advice that Google propose when inputting.
<b>Searchable items</b>	You can choose to search content on the phone, including: browser, contacts, applications and music.
<b>Clear search shortcuts</b>	Clear shortcuts of the search results chosen currently.

## About phone

Tap "Settings" and then select "About phone" switch to About Settings interface.

Configuration item	Meaning
Status	Display phone status information. My phone number: Display phone number on each line. Mobile network type: Whether successfully or

unsuccessfully the phone connect to the network.

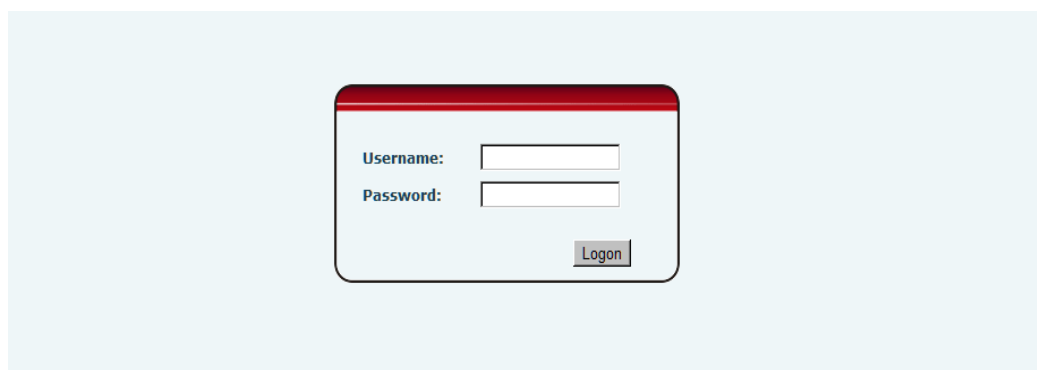

MAC address: Show the physical address of the phone.

Up time: Shows the running time of the phone to boot.

Legal information	Show open-source licensing information.
System tutorial	Display open-source licensing information
Model number	Display phone model.
Firmware version	Shows the android version number.
Kernel version	Display system of Linux kernel version.
Build number	Display phone version information.

## Web page configuration description

When both of the SE780 phone and your PC are successfully connected to the network, enter the IP address and the web browser port about your phone as the URL such as "http://xxx.xxx.xxx.xxx(such as: http://192.168.1.32), then you can see the login page shows as the following picture. Enter the user name and password and click "Logon" button to the detailed interface.

**Login page**

The web logo is in the left of the web. The figure:

**LOGO**

## Basic

- **Status**

The screenshot shows a web interface with a red sidebar on the left containing menu items: BASIC, NETWORK, VOIP, PHONE, MAINTENANCE, SECURITY, and LOGOUT. The main content area is light blue and displays the following information:

Network			
MAC Address	00:a8:59:c5:29:fa		
IP Address	192.168.1.44		
Accounts			
SIP Line 1	@:5060	Unapplied	
SIP Line 2	@:5060	Unapplied	
SIP Line 3	@:5060	Unapplied	
SIP Line 4	@:5060	Unapplied	

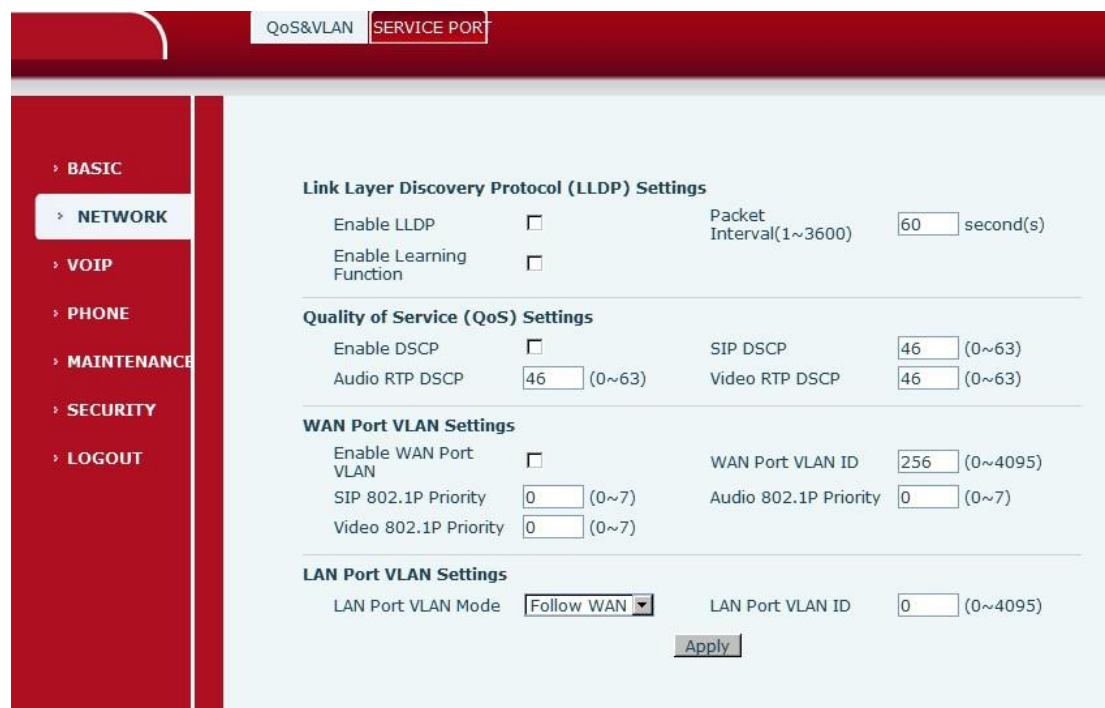

At the bottom of the interface, a grey bar displays the text: Version: 2.2.10.6.1

### STATUS interface

#### Status

Field name	Explanation
Network	Shows the MAC address and IP address of the telephone.
Phone Number	Shows the phone numbers provided by the SIP LINE 1-4 servers. The last line shows the version number and issued date.

## Network

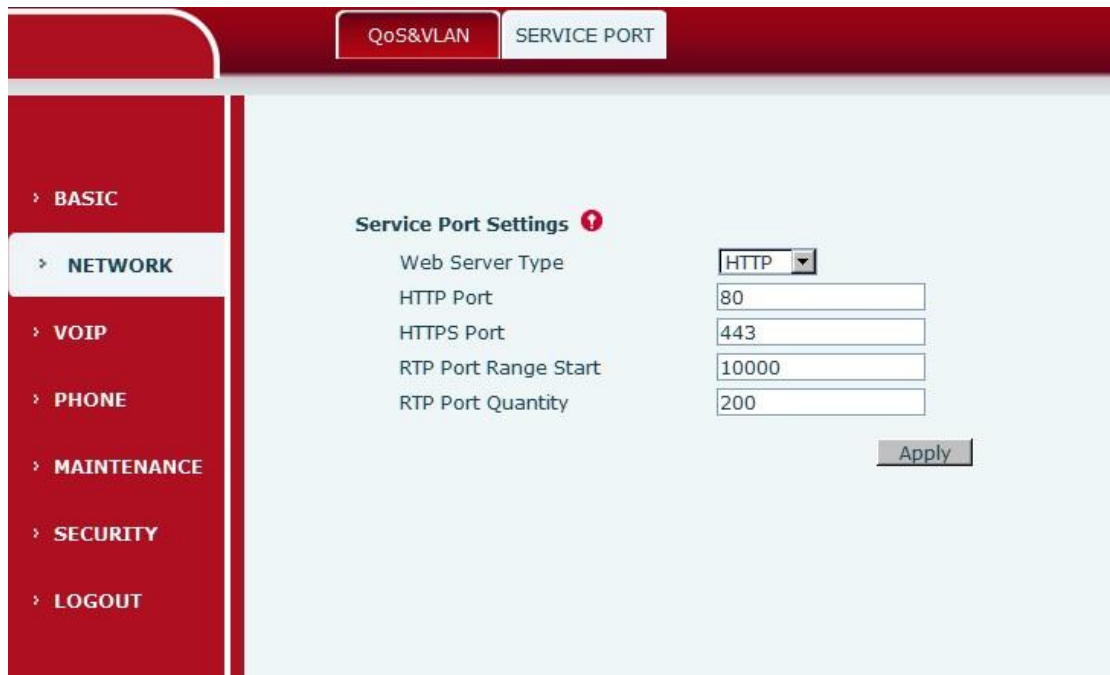

**QOS&VLAN interface**

### QOS&VLAN

Field name	Explanation
<b>Link Layer Discovery Protocol (LLDP) Settings</b>	
<b>Enable LLDP</b>	Open the phone's function to send LLDP messages.
<b>Enable Learning Function</b>	Open the phone's function to learn LLDP. After enabling LLDP Learn, telephone can automatically learn the number of DSCP, 802.1p, VLAN ID of the network. If the number is different from the number of network, telephone will change its own value to the value of the network.
<b>Package Interval(1--3600)</b>	The time interval to send LLDP messages of the phone, the unit is seconds. Default is 60 seconds.
<b>Quality of Service (QoS) Settings</b>	
<b>Enable DSCP</b>	Enable/Disable DSCP
<b>Audio RTP DSCP</b>	Set the number of Audio RTP DSCP.(Valid value is 0--63)
<b>Video RTP DSCP</b>	Set the number of Video RTP DSCP.(Valid value is 0--63)
<b>SIP DSCP</b>	Set the number of Signal DSCP.(Valid value is 0--63)
<b>WAN Port VLAN Settings</b>	
<b>Enable WAN Port</b>	Enable/Disable VLAN.

<b>VLAN</b>	
<b>WAN Port VLAN ID</b>	Set the number of VLAN ID. Range is 0~4095.
<b>SIP 802.1P Priority</b>	Set the priority number of SIP 802.1p. Valid value is 0~7.
<b>Audio 802.1P Priority</b>	Set the priority number of Audio 802.1p. Valid value is 0~7.
<b>Video 802.1P Priority</b>	Set the priority number of Signal 802.1p. Valid value is 0~7.
<b>LAN Port VLAN Mode</b>	Select LAN Port VLAN Mode. <ul style="list-style-type: none"> <li>➤ Disable: Disable Port VLAN.</li> <li>➤ Follow WAN: Follow the ID number of WAN.</li> <li>➤ Enable: Enable Port VLAN and set the Port VLAN ID different from WAN.</li> </ul>
<b>LAN Port VLAN ID</b>	Set the number of Port VLAN ID different from WAN. Range is 0~4095.

SERVER PORT interface

<b>SERVER</b>	
Field name	Explanation
<p><b>Service Port Settings</b> ⓘ</p> <p><b>Notice: Please reboot the system if you modify the HTTP port number(The new number should be greater than 1024)!</b></p>	

<b>Web Server Type</b>	Use the type of web server, you can choose HTTP or HTTPS. After selecting one server, you can use the selected server to login the telephone's web page. Such as : <a href="https://192.168.1.25">https://192.168.1.25</a> or <a href="http://192.168.1.25">http://192.168.1.25</a> .
<b>HTTP Port</b>	Set HTTP web browser port, the default is 80 port, if you want to enhance system safety, you'd better change it into non-80 standard port; Example: The IP address is 192.168.1.70. and the port value is 8090, the accessing address is <a href="http://192.168.1.70:8090">http://192.168.1.70:8090</a>
<b>HTTPS Port</b>	Set HTTPS web browser port.
<b>RTP Port Range Start</b>	Set the RTP Initial Port. It is dynamic allocation.
<b>RTP Port Quantity</b>	Set the maximum quantity of RTP Port, the default is 200.

## VOIP

- SIP

**Advanced SIP Setting interface**

### Sip Configuration

Field name	Explanation
SIP Line	<input type="text" value="SIP 1"/>

Choose line to set info about SIP, there are 4 lines to choose.

Basic Settings	
<b>Status</b>	Shows whether the phone has been registered the SIP server, if not, show Unapplied.
<b>Server Address</b>	Input your SIP server address.
<b>Server Port</b>	Set your SIP server port.
<b>Authentication User</b>	Input your SIP register account name.
<b>Authentication Password</b>	Input your SIP register password.
<b>SIP User</b>	Input the phone number assigned by your VoIP service provider. Phone will not register if there is no phone number configured.
<b>Display Name</b>	Set the display name.

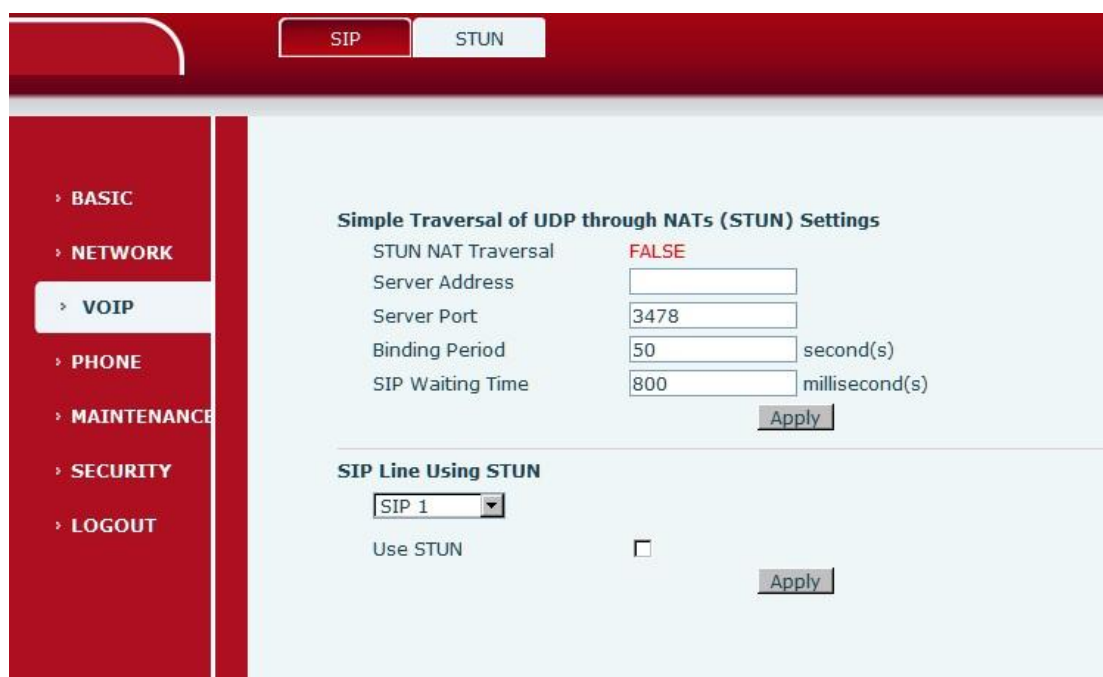

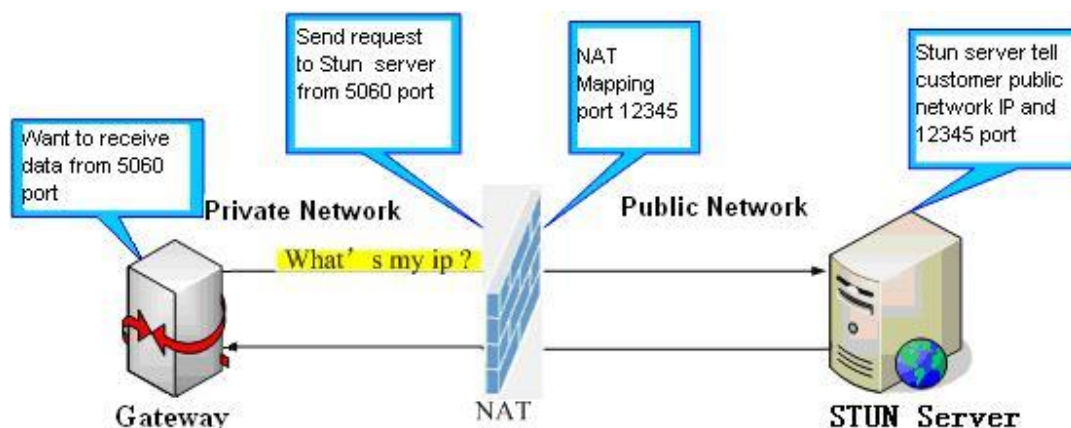

<b>Enable Registration</b>	Enable/Disable resistration.
<b>Domain Realm</b>	Set the sip domain if needed, otherwise this VoIP phone will use the Register server address as sip domain automatically. (Usually it is same with registered server and proxy server IP address).
<b>Proxy Server Address</b>	Set proxy server IP address. (Usually, Register SIP Server configuration is the same as Proxy SIP Server. But if your VoIP service provider give different configurations between Register SIP Server and Proxy SIP Server, you need make different settings)
<b>Proxy Server Port</b>	Set your Proxy SIP server port.
<b>Proxy User</b>	Input your Proxy SIP server account.
<b>Proxy Password</b>	Input your Proxy SIP server password.
<b>Backup Server Address</b>	Phone backup server address, if the primary server is not successfully registered then enabled the backup server.
<b>Backup Server port</b>	Configure the backup server port.
<b>Server Name</b>	Set the server name. It is displayed on the dialer interface.
<b>Advanced SIP Settings</b>	
<b>SIP Encryption</b>	Enable/Disable Signal encryption.
<b>SIP Encryption Key</b>	Set the key for signal encryption.
<b>RTP Encryption</b>	Enable/Disable RTP encryption.
<b>RTP Encryption Key</b>	Set the key for RTP encryption.
<b>Enable BLF List</b>	Enable/Disable BLF List.
<b>BLF List Number</b>	Input the BLF List number.
<b>Keep Alive Type</b>	Select the keep alive type, if the type is SIP option, the phone will send option sip message to server every NAT Keep Alive Period(s), then the server responses with 200 to keep alive. If the type is UDP, the phone will send UDP message to server to keep alive every NAT Keep Alive Period(s).

<b>Keep Alive Interval</b>	Set examining interval of the server, default is 60 seconds
<b>User Agent</b>	Set the user agent if you have, the default is VoIP Phone 1.0.
<b>DTMF Type</b>	Select DTMF sending mode, there are three modes: * DTMF_RELAY * DTMF_RFC2833 * DTMF_SIP_INFO. Different service providers may provide different mode.
<b>Local Port</b>	Set sip port of each line.
<b>Anonymous Call Edition</b>	Set Anonymous call out safely; Support RFC3323 and RFC3325.
<b>Enable rport</b>	Enable or disable system to support RFC3581. Via rport is a special way to realize SIP NAT.
<b>Enable PRACK</b>	Enable/Disable SIP PRACK function (basically is used at). Suggest using the default configuration.
<b>Enable Long Contact</b>	Set more parameters in contact field, connect with SEM server.
<b>Convert URI</b>	Convert # to %23 when send the URI.
<b>Dial Without Registered</b>	Enable/Disable Dial without Register. If enabled, you can call directly the gateway.
<b>Ban Anonymous Call</b>	Set to ban anonymous Call.
<b>Enable DNS SRV</b>	Support DNS looking up with _sip.udp mode
<b>Enable Session Timer</b>	Enable/Disable Session Timer to support RFC4028 or not. It will refresh the SIP sessions.
<b>Session Timeout</b>	Set the time out of the session.
<b>Conference Type</b>	Select "Local" or "Remote".
<b>Conference Number</b>	Input the number of the conference.
<b>Subscribe for MWI</b>	Enable/Disable the subscribe for MWI.
<b>MWI Number</b>	Input MWI number.
<b>Subscribe Period</b>	Overtime of resending subscribe packet. Suggest using the default configuration.
<b>Registration Expires</b>	Set expire time of SIP server register, default is 60 seconds. If the register time of the server requested is longer or shorter than the expire time, the phone will change automatically the time into the time

	recommended by the server, and register again.
<b>Server Type</b>	Select the special type of server which is encrypted, or has some unique requirements or call flows.
<b>RFC Protocol Edition</b>	Select SIP protocol version to adapt for the SIP server which uses the same version as you select. For example, if the server is CISCO5300, you need to change to RFC2543, else phone may not cancel call normally. System uses RFC3261 as default.
<b>Transport Protocol</b>	Set transport protocols, TCP or UDP.
<b>Keep Authentication</b>	Enable or Disable. Keep Authentication. If it is enabled, system will take the last authentication field which is passed the authentication by server to the request packet. It will decrease the server's repeated authorization work
<b>Click to talk</b>	Set click to Talk (need practical software support).
<b>Ans. With a Single Codec</b>	Enable/Disable the function. When call is incoming, phone replies SIP message with just one codec which phone supports.
<b>Auto TCP</b>	Set to use automatically TCP protocol to guarantee usability of transport when message is above 1300 byte.
<b>Enable Strict Proxy</b>	Support the special SIP server-when phone receives the packets sent from server, phone will use the source IP address, not the address in via field.
<b>Enable GRUU</b>	Set to support GRUU.
<b>Enable Displayname Quote</b>	Set to make quotation mark to display name as the phone sends out signal, in order to be compatible with server.
<b>Enable user=phone</b>	Enable user=phone by selecting it, it is contained in the invite sip message, in order to be compatible with server.

- **Stun Configuration**

By STUN server, the phone in private network could know the type of NAT and the NAT mapping IP and port of SIP. The phone might register itself to SIP server with global IP and port to realize the device both calling and being called in private network.

**STUN interface**

### STUN

Field name	Explanation
<b>Simple Traversal of UDP through NATs (STUN) Settings</b>	
<b>STUN NAT Transversal</b>	Shows STUN NAT Transverse estimation, true means STUN can penetrate NAT, while False means not.
<b>STUN Server Address</b>	Set your SIP STUN Server IP address.
<b>Server Port</b>	Set your SIP STUN Server IP port.
<b>Binding Period</b>	Set STUN Binding Period . If NAT server finds that a NAT mapping is idle after time out, it will release the mapping and the system need send a STUN packet to keep the mapping effective and alive.

**SIP Waitting Time** When use stun, call waiting for the response of the stun overtime time.

**Use Stun** Enable / disable SIP STUN.

**Note:** SIP STUN is used to realize SIP penetration to NAT. If your phone configures STUN Server IP and Port (default is 3478), and enable SIP Stun, you can use the ordinary SIP Server to realize penetration to NAT.

## PHONE

- MEDIA**

The screenshot shows the 'MEDIA' configuration page. On the left is a navigation menu with options: BASIC, NETWORK, VOIP, PHONE (selected), MAINTENANCE, SECURITY, and LOGOUT. The main content area is divided into two sections: 'Audio Settings' and 'Video Settings'. Each section contains various parameters with dropdown menus and input fields, and an 'Apply' button at the bottom.

**Audio Settings:**

- First Codec: G.711U
- Second Codec: G.711A
- Third Codec: G.729AB
- Fourth Codec: None
- Fifth Codec: None
- Sixth Codec: None
- Seventh Codec: None
- Eighth Codec: None
- Tone Standard: China
- DTMF Payload Type: 101 (96~127)
- ILBC Payload Type: 97 (96~127)
- ILBC Payload Length: 20ms
- AMR Payload Type: 108 (96~127)
- AMR-WB Payload Type: 109 (96~127)
- G.723.1 Bit Rate: 6.3kb/s
- G.729AB Payload Length: 20ms
- Hook Check: Normal
- Enable VAD:

**Video Settings:**

- First Video Codec: H.264
- Second Video Codec: H.263
- Third Video Codec: None
- Video Packet Size: 1200 Bytes
- H.264 Payload Type: 117 (96~127)
- Mpeg4 Payload Type: 125 (96~127)
- Video Bit Rate: 768kbps
- Video Frame Rate: 30fps
- Video Resolution: CIF(352\*288)

**MEDIA interface**

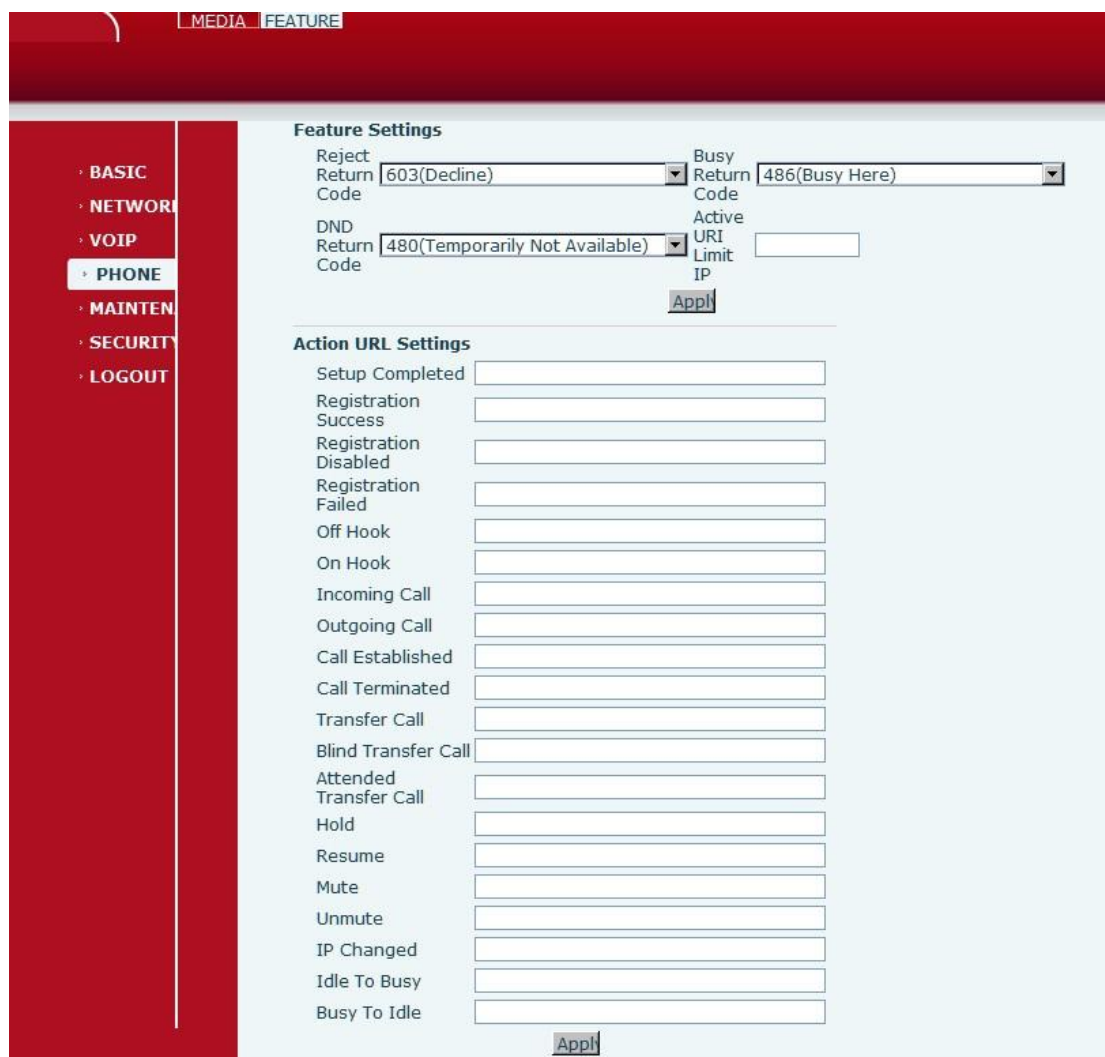

### MEDIA Configuration

Field name	Explanation
<b>Audio Settings</b>	
<b>First Codec</b>	The first preferential DSP codec: G.711A/u,G.722,G.723,G.729,iLBC,ARM,ARM-WB
<b>Second Codec</b>	The second preferential DSP codec: G.711A/u,G.722,G.723,G.729,iLBC,ARM,ARM-WB
<b>Third Codec</b>	The third preferential DSP codec: G.711A/u,G.722,G.723,G.729,iLBC,ARM,ARM-

	WB
<b>Fourth Codec</b>	The fourth preferential DSP codec: G.711A/u,G.722,G.723,G.729,iLBC,ARM,ARM-WB
<b>Fifth Codec</b>	The fifth preferential DSP codec: G.711A/u,G.722,G.723,G.729,iLBC,ARM,ARM-WB
<b>Sixth Codec</b>	The sixth preferential DSP codec: G.711A/u,G.722,G.723,G.729,iLBC,ARM,ARM-WB
<b>Seventh Codec</b>	The seventh preferential DSP codec: G.711A/u,G.722,G.723,G.729,iLBC,ARM,ARM-WB
<b>Eighth Codec</b>	The eighth preferential DSP codec: G.711A/u,G.722,G.723,G.729,iLBC,ARM,ARM-WB
<b>Tone Standard</b>	Select Signal standard.
<b>DTMF payload Type</b>	Configure a dual - tone multi-frequency's effective payload.
<b>ILBC Payload Type</b>	Set the ILBC load type, value based on 96-127.
<b>ILBC Payload Length</b>	Set the ILBC payload length.
<b>ARM Payload Type</b>	Set the ARM payload type.
<b>ARM-WB Payload Type</b>	Set the ARM-WB payload type.
<b>G723.1 Bit Rate</b>	Select the G.723.1 rate, it has two rates.(5.3kb / s or 6.3kb / s)
<b>G729AB Payload Length</b>	Configure the G729AB audio coding Payload length.
<b>Hook Check</b>	Check the on-hook or off-hook status, if the on-hook, but the screen status is off-hook, use this option.
<b>Enable VAD</b>	Mute detection; if you enable VAD, G.729 payload length cannot be set more than 20ms.
<b>Video Settings</b>	
<b>First Video Codec</b>	The first preferential video codec: H.263, H.264, Mpeg4.
<b>Second Video Codec</b>	The second preferential video codec: H.263, H.264, Mpeg4.
<b>Third Video Codec</b>	The third preferential video codec: H.263, H.264, Mpeg4.
<b>Video Packet Size</b>	Video packet size.
<b>H.264 Payload Type</b>	Set the H.264 payload type, value based on 96-127.

<b>Mpeg4 Payload Type</b>	Set the Mpeg4 payload type, value based on 96-127.
<b>Video Bit Rate</b>	Set the Video Bit Rate.
<b>Video Frame Rate</b>	Set the Video Frame Rate.
<b>Video Resolution</b>	Set video resolution: QCIF, CIF and 4CIF.

• **FEATURE**

FEATURE interface

**FEATURE**

Field name	Explanation
<b>Feature Settings</b>	
<b>Reject Return Code</b>	603, server reject the invite.
<b>Busy Return Code</b>	486, server is busy.
<b>DND Return Code</b>	480, do not disturb.
<b>Active URI Limit IP</b>	Input the server IP of the active URI.

**Action URL Settings**

Input the Action URL, then click the **Apply** button to see whether the operation of the lcd screen is right.

# MAINTENANCE

- **Auto Provision**

t

The screenshot displays the 'AUTO PROVISION' configuration page. It features a top navigation bar with tabs for 'AUTO PROVISION', 'SYSLOG', 'CONFIG', 'UPDATE', 'ACCESS', and 'REBOOT'. A left sidebar contains a menu with options: 'BASIC', 'NETWORK', 'VOIP', 'PHONE', 'MAINTENANCE' (highlighted), 'SECURITY', and 'LOGOUT'. The main content area is divided into several sections:

- Auto Provision Settings:** Includes fields for 'Current Config Version' (2.0002), 'Common Config Version' (2.0002), 'CPE Serial Number', 'User' (user), 'Password' (masked with dots), 'Config Encryption Key', 'Common Config Encryption Key', and a checkbox for 'Save Auto Provision Information'.
- DHCP Option Settings >>:** Includes a dropdown for 'DHCP Option Setting' (DHCP Option Disable) and a text field for 'Custom DHCP Option' (0) with a range of (128~254).
- Plug and Play (PnP) Settings >>:** Includes a checkbox for 'Enable PnP', a text field for 'PnP Server' (224.0.1.75), a text field for 'PnP Port' (5060), a dropdown for 'PnP Transport' (UDP), and a text field for 'PnP Interval' (1) with the unit 'hour(s)'. An 'Apply' button is located at the bottom right of this section.
- Phone Flash Settings >>:** Includes a text field for 'Server Address' (0.0.0.0), a text field for 'Config File Name', a dropdown for 'Protocol Type' (FTP), a text field for 'Update Interval' (1) with the unit 'hour(s)', and a dropdown for 'Update Mode' (Disabled).
- TR069 Settings >>:** Includes a checkbox for 'Enable TR069', a dropdown for 'ACS Server Type' (CTC), text fields for 'ACS Server URL', 'ACS User', and 'ACS Password', a checkbox for 'TR069 Auto Login', and a text field for '"Inform" Sending Period' (0) with the unit 'second(s)'. An 'Apply' button is located at the bottom right of this section.

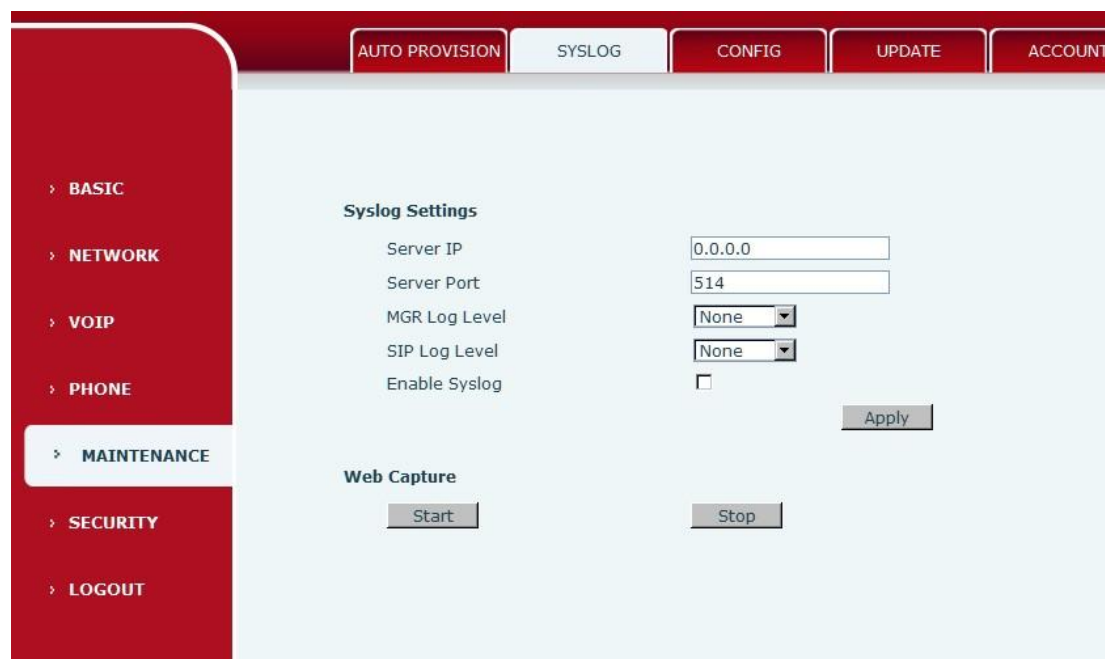

**AUTO PROVISION interface**

**AUTO PROVISION**

<b>Field name</b>	<b>Explanation</b>
<b>Auto Update Settings</b>	
<b>Current Config Version</b>	Show the current config file's version. If the version of the configuration downloaded is higher than the version of the running configurations, the auto provision would upgrade, or stop here. If the endpoints confirm the configuration by Digest method, the endpoints wouldn't upgrade configuration unless the configuration in the server is different with the running configuration.
<b>Common Config Version</b>	Show the common config file's version. If the configuration downloaded and the running configurations are the same, the auto provision would stop here. If the endpoints confirm the configuration by Digest method, the endpoints wouldn't upgrade configuration unless the configuration in the server is different with the running configuration.
<b>CPE Serial Number</b>	Shows the Serial CPE number. It depends on the server.
<b>User</b>	Specify FTP/HTTP/HTTPS server Username. System will use anonymous if username keep blank.
<b>Password</b>	Specify FTP/HTTP/HTTPS server Password.
<b>Config Encryption Key</b>	Input the Encrypt Key, if the configuration file is encrypted.
<b>Common Config Encryption Key</b>	Input the Common Encrypt Key, if the Common Configuration file is encrypted.
<b>Save Auto Provision Information</b>	Save the username and password authentication message of http/https/ftp and input ID message in the phone until the url in the server changes.
<b>DHCP Option Settings</b>	
<b>DHCP Setting Option</b>	Specify DHCP Option. DHCP option supports DHCP custom option and DHCP option 66 and DHCP option 43 to obtain the parameters. You could choose one method among them , the default is DHCP option disable.
<b>Custom DHCP Option</b>	A valid Custom DHCP Option is from 128 to 254. The Custom DHCP Option must be in accordance with the one defined in the DHCP server.
<b>Plug and Play</b>	

<b>Enable PnP</b>	Enable/Disable PNP.
<b>PnP Server</b>	Specify the PnP Server
<b>PnP Port</b>	Specify the PnP Server
<b>PnP Transport</b>	Specify the PnP Transfer protocol
<b>PnP Interval</b>	Specify the Interval time, unit is hour
<b>Phone Flash</b>	
<b>Server Address</b>	Set FTP/TFTP/HTTP server IP address for auto update. The address can be IP address or Domain name with subdirectory.
<b>Config File Name</b>	Set configuration file's name which need to update. System will use MAC as config file name if config file name keep blank. For example, 000102030405.。
<b>Protocol Type</b>	Specify the Protocol type FTP、TFTP or HTTP.
<b>Update Interval</b>	Specify update interval time, unit is hour.
<b>Update Mode</b>	Different update modes: 1. Disable: means no update 2. Update after reboot: means update after reboot. 3. Update at time interval: means periodic update.
<b>TR069 Settings</b>	
<b>Enable TR069</b>	Enable TR069 by selecting it.
<b>ACS Server Type</b>	Specify the ACS Server Type.
<b>ACS Server URL</b>	Specify the ACS Server URL.
<b>ACS User</b>	Specify ACS User.
<b>ACS Password</b>	Specify ACS Password.
<b>TR069 Auto Login</b>	Enable TR069 Auto Login by selecting it.
<b>"Inform" Sending Period</b>	Specify the "inform" Sending Period, unit is second.

• **SYSLOG**

**SYSLOG interface**

<b>Syslog Configuration</b>	
Field name	Explanation
<b>Syslog Settings</b>	
<b>Server IP</b>	Set Syslog server IP address.
<b>Server Port</b>	Set Syslog server port.
<b>MGR Log Level</b>	Set the level of MGR log.
<b>SIP Log Level</b>	Set the level of SIP log.
<b>Enable Syslog</b>	Select it or not to enable or disable syslog.
<b>Web Capture</b>	
Start	Click the start button when you need capture the WAN packet stream of the phone, then open or save the file as the interface.
Stop	Click the end button to stop capturing the packet stream.

**Note:**

Syslog is a protocol which is used to record the log messages with client/server mechanism. Syslog server receives the messages from clients, and classifies them based on priority and type. Then these messages will be written into log by some rules which administrator can configure. This is a better way for log management.

8 levels in debug information:

Level 0---emergency: This is highest default debug info level. Your system cannot work.

Level 1---alert: Your system has deadly problem.

Level 2---critical: Your system has serious problem.

Level 3---error: The error will affect your system working.

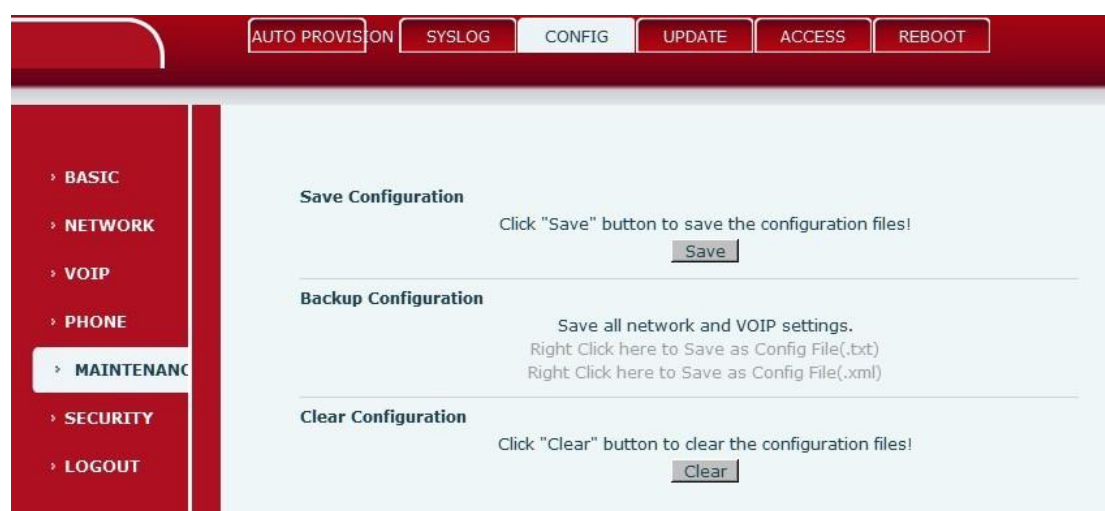

Level 4---warning: There are some potential dangers. But your system can work.

Level 5---notice: Your system works well in special condition, but you need to check its working environment and parameter.

Level 6---info: the daily debugging info.

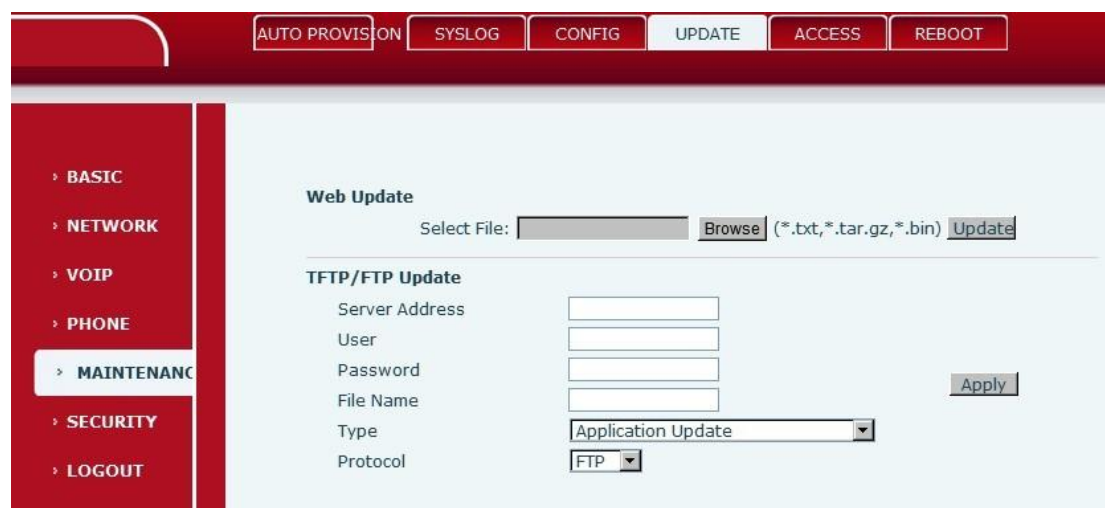

Level 7---debug: the lowest debug info Professional debugging info from R&D person.

At present, the lowest level of debug information is info; debug level only can be displayed on telnet.

CONFIG interface

CONFIG	
Field name	Explanation
<b>Save Configuration</b>	You can save all changes of configurations. Click the Save button, all changes of configuration will be saved, and be effective immediately.
<b>Backup Configuration</b>	Right clicks on “Right click here...” and select “Save Target As...” then you will save the config file in .txt or .xml format.
<b>Clear Configuration</b>	User can restore factory default configuration and reboot the phone. If you login as Admin, the phone will reset all configurations and restore factory default; if you login as Guest, the phone will reset all configurations except for VoIP accounts (SIP1-4) and version number.

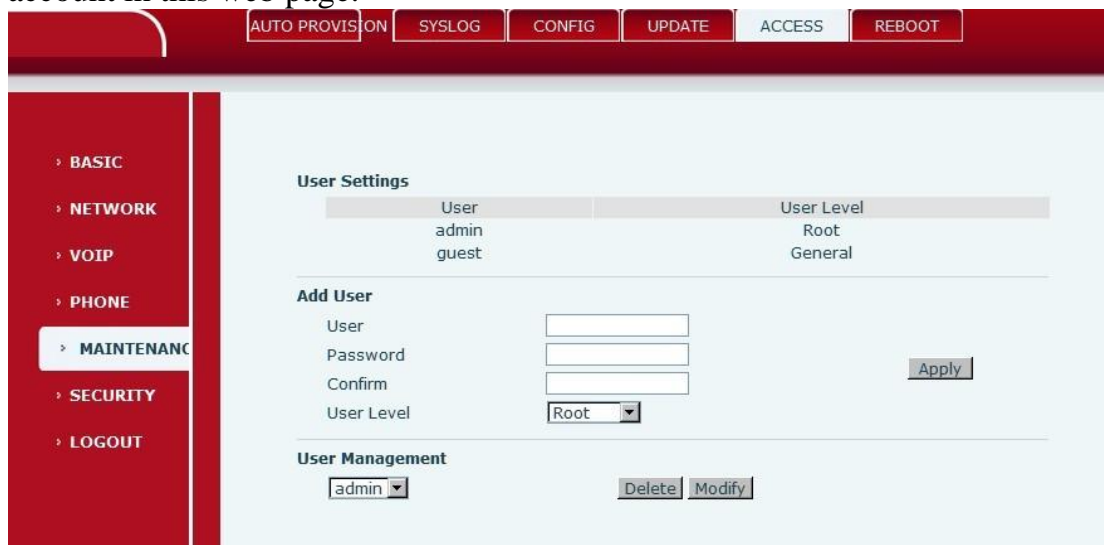

UPDATE interface

<b>Update</b>	
<b>Field name</b>	<b>Explanation</b>
<b>Web Update</b>	Click the browse button, find out the config file saved before or provided by manufacturer, download it to the phone directly, press “Update” to save. You can also update downloaded update file, firmware by web.
<b>TFTP/FTP Update</b>	
<b>Server</b>	Set the FTP/TFTP server address for download/upload. The address can be IP address or Domain name with subdirectory.
<b>Username</b>	Set the FTP server Username for download/upload.
<b>Password</b>	Set the FTP server password for download/upload.
<b>File name</b>	Set the name of update file or config file. The default name is the MAC of the phone, such as 000102030405.
<b>Notice:</b> You can modify the exported config file. And you can also download config file which includes several modules that need to be imported. For example, you can download a config file just keep with SIP module. After reboot, other modules of system still use previous setting and are not lost.	
<b>Type</b>	Action type that system want to execute: 1. Application update: download system update file 2. Config file export: Upload the config file to FTP/TFTP server, name and save it. 3. Config file import: Download the config file to phone from FTP/TFTP server. The configuration will be effective after the phone is reset.
<b>Protocol</b>	Select FTP/TFTP server

• **ACCESS**

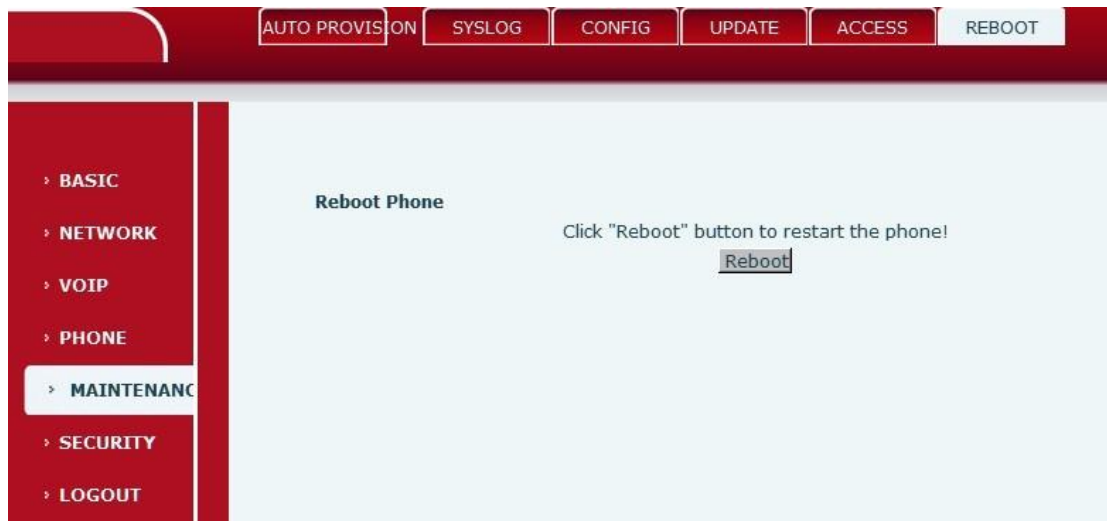

You can add or delete user account, and change the authority of each user account in this web page.

**ACCESS interface**

ACCESS	
Field name	Explanation
<b>User Settings</b>	
	
This table shows the current user existed.	
<b>Adding User</b>	
<b>User Name</b>	Set account user name.
<b>Password</b>	Set the password.
<b>Confirm</b>	Confirm the password.
<b>User Level</b>	Set user level. Root user has the right to modify configuration, General can only read.
<b>User Management</b>	
Select the account and click the <b>Modify</b> to modify the selected account, and click the <b>Delete</b> to delete the selected account. General user only can add the user whose level is General.	

• **REBOOT**

**REBOOT interface**

<b>REBOOT</b>	
Field name	Explanation
<b>Reboot Phone</b>	<p>If you modified some configurations which need the phone’s reboot to be effective, you need click the Reboot, then the phone will reboot immediately.</p> <p>Notice: Before reboot, you need confirm that you have saved all configurations.</p>

## SECURITY

• **WEB FILTER**

### WEB FILTER interface

WEB FILTER	
Field name	Explanation
<b>WEB Filter Table</b>	
User could make some device own IP, which is pre-specified, access to the MMI of the phone to config and manage the phone. <b>Note: After configuration, you need to reboot the system to make it take effect.</b>	
<b>WEB Filter Table Settings</b>	
Add or delete the IP address segments that access to the phone. Set initial IP address in the Start IP column, Set end IP address in the End IP column, and click Add to add this IP segment. You can also click Delete to delete the selected IP segment.	
<b>WEB Filter Setting</b>	
<b>Enable Web Filter</b>	Select it or not to enable or disable Web Filter. Click Apply to make it effective.

### SECURITY interface

SECURITY	
Field name	Explanation
<b>Update Security File</b>	
Browse the security file you want to update, then click "Update" to update.	

## LOGOUT

- **Logout**

**Logout interface**

<b>Logout</b>	
<b>Field name</b>	<b>Explanation</b>
<b>Logout</b>	Click "logout" and you will exit web page. If you want to enter it next time, you need input user name and password again.
